Casablanca Highlights

As an aid to describing to interested parties outside of ONAP the major changes, improvements, features, etc. developed during the Casablanca release I've created the following slide package. As I'm focusing on audiences from outside the ONAP community I haven't included activities that are largely internal even though they might be very important (e.g. improvements in S3P goals). As many of the projects worked on use-cases I didn't highlight all of these changes in the project summaries.

If I've made any errors, missed anything you think should be included or included activities that aren't complete please let me know.

Cheers, Roger
