

AAI

- What is it?
 - Stands for Active & Available Inventory
 - Registry of the active, available, and assigned assets in ONAP
 - Subsystem that provides real-time management & views of the resources, services, and their relationships via dynamic schema-driven APIs

Sparky UI

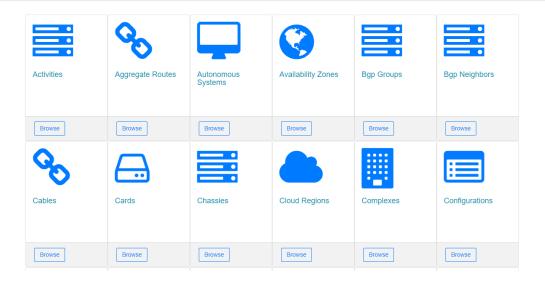

- Schema-driven functionality
- Inventory browsing & filtering
- Self Serve Complex DSL (Domain Specific Language) Query creation
- Visual DSL Query Builder

Sparky Browsing

■ A&AI

Browse Network Elements

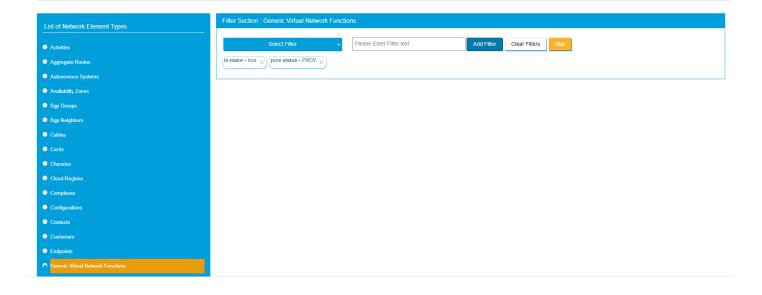

On this page you have the ability to browse the entire inventory of the database by network element type. Simply choose the network element type you would like to browse.

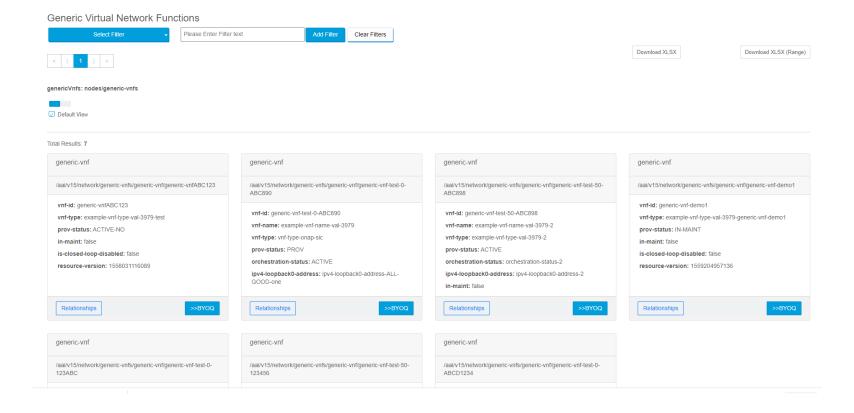

Sparky Filtering

Network Element Specialized Search

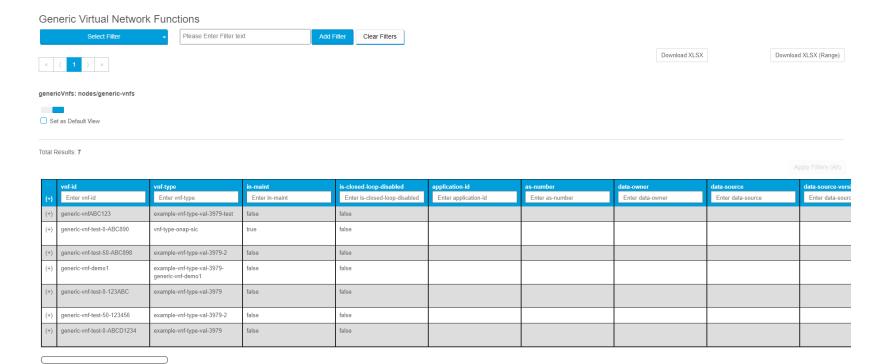

On this page you have the ability to build a set of query criteria per network element type and run a query. Simply choose the network element type from the radio buttons, build your filters, and run.

Sparky Results (Card Based)

Sparky Results (Table Based)

Sparky DSL Query Builder

Visual Query Builder for Build Your Own Query

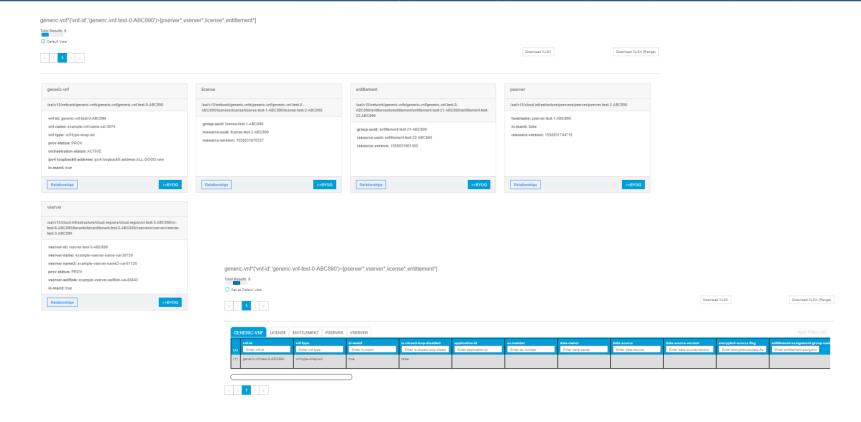

Visually build your own query, you can click the + icon to add objects to your query, - icon to remove objects from your query, or the pencil icon/double click to edit attributes. Single click and drag in the view to pan, use scrollwheel or pinch to zoom.

DSL Query: generic-vnf*('vnf-id', 'generic-vnf-test-0-ABC890')>[entitlement*,pserver*,vserver*,license*]
