Apollo 13
"Houston, we've had a problem"

Looking for an ONAP Integration PTL…..

We still have committers:13 -4 +3 =12

Catherine — AT&T (Belgium)

Brian — AT&T (USA)

Lukasz — orange (Poland)

Bartek — SAMSUNG (Poland)

Lasse — SAMSUNG (Finland)

Marcin — NOKIA (Poland)

Christophe — AT&T (Belgium)

Pawel — SAMSUNG (Poland)

Morgan — orange

Michal — T··· (Poland)

Thierry — orange

Andreas — T··· (Germany)

Krzysztof — NOKIA (Poland)

+ Illia Halych (T-Mobile)
+ Alexander Mazuruk (Samsung)
+ Bartpsz Gardziejewski (Nokia)

How to move forward...

- Main issue is that Integration PTL is
  - a real full time job (in the middle of the game)
  - with commitments (responsible in front of the TSC for the release)
  - Dealing with lots admin (JIRA, reporting to PTL, reporting to TSC)
  - Dealing with code (not a commitee or a task force)

Could we lighten the load..

- Some activities could be done by the release manager
  - Daily results follow-up
  - RC version tracking
  - Release criteria
  - INTEGRATION/TEST JIRA follow up
  - Weekly integration meeting management/minutes
- Some activities could be done by SECCOM
  - Dev/Update of the security tests
  - Update of the recommendations/waivers in the code (not in the wiki)
  - Management of the baseline images
- Some activities could be done by LF IT
  - Repository management (creation, INFO.yaml update, alias)
  - Jenkins CI management (tools imposed by LF IT)
  - Integration and testing Docker release management

Could we lighten the load..

- We may split integration commitments
  - CI/CD, "integration" activities
  - Testing activities : support pythonsdk/robot extensions, develop new use cases + support to other use cases
  - Lab support : grant access, redeploy staging labs
