Planning for Holmes Development

Guangrong Fu

September 26, 2017

Status by the Release of Amsterdam

Integration

DCAE

- semi-automated

Policy

- control loop implementated
- GUI not integrated

CLAMP

- control loop implementated
- not flexible enough

MSB

- integrated

UUI

- integrated

A&AI

- integrated

Status by the Release of Amsterdam

Functionalities

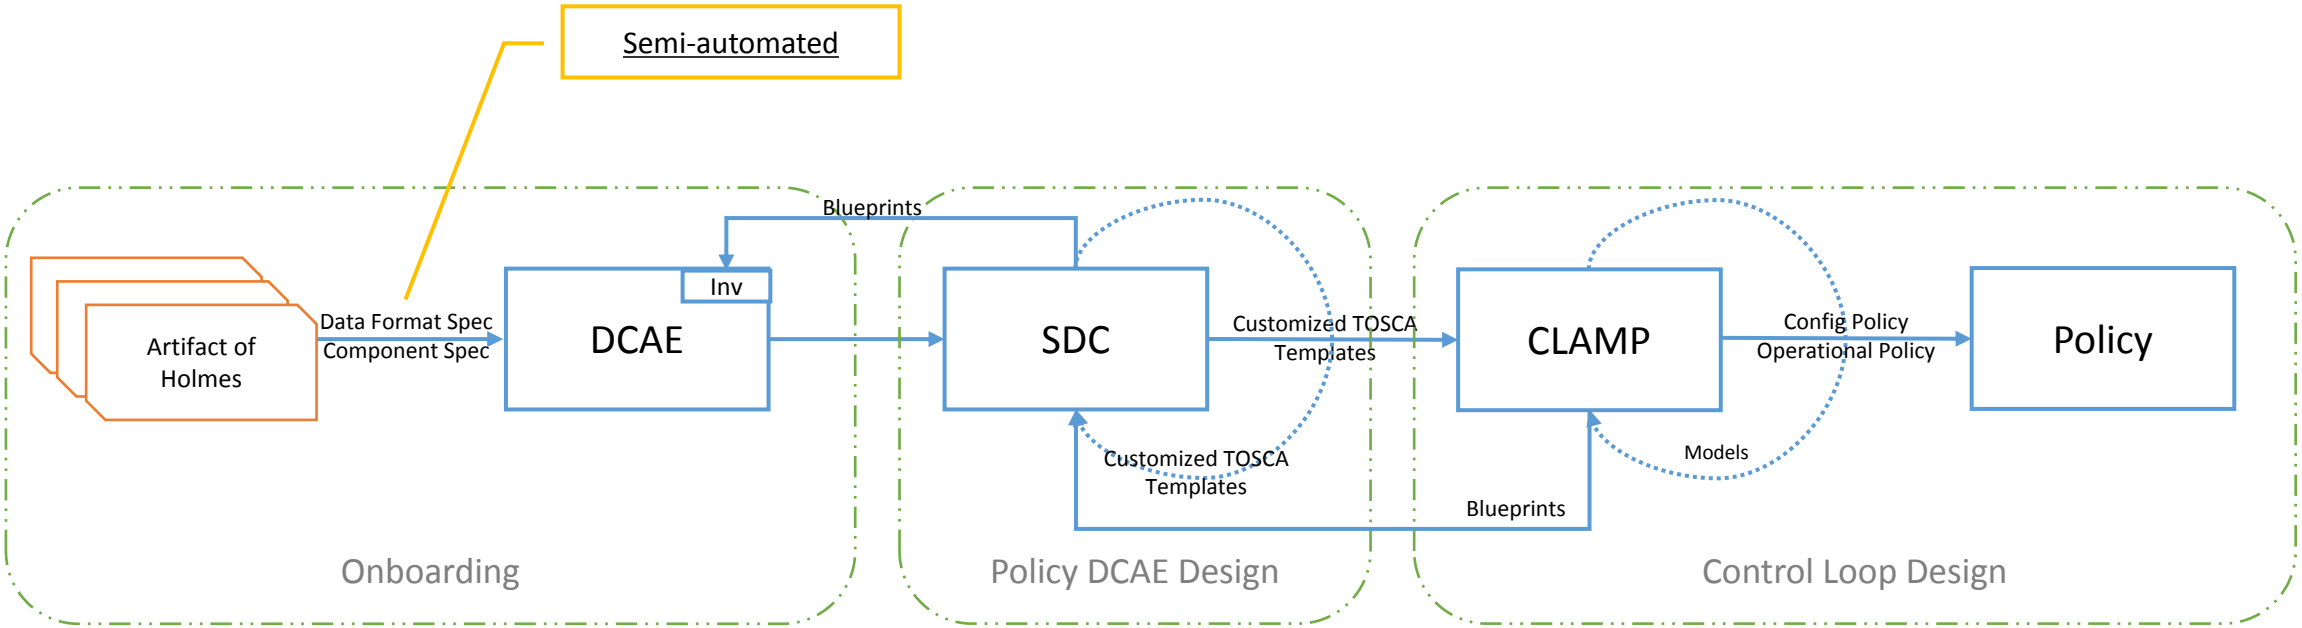
Correlation Analysis

- correlation analysis for VNF & VM implemented

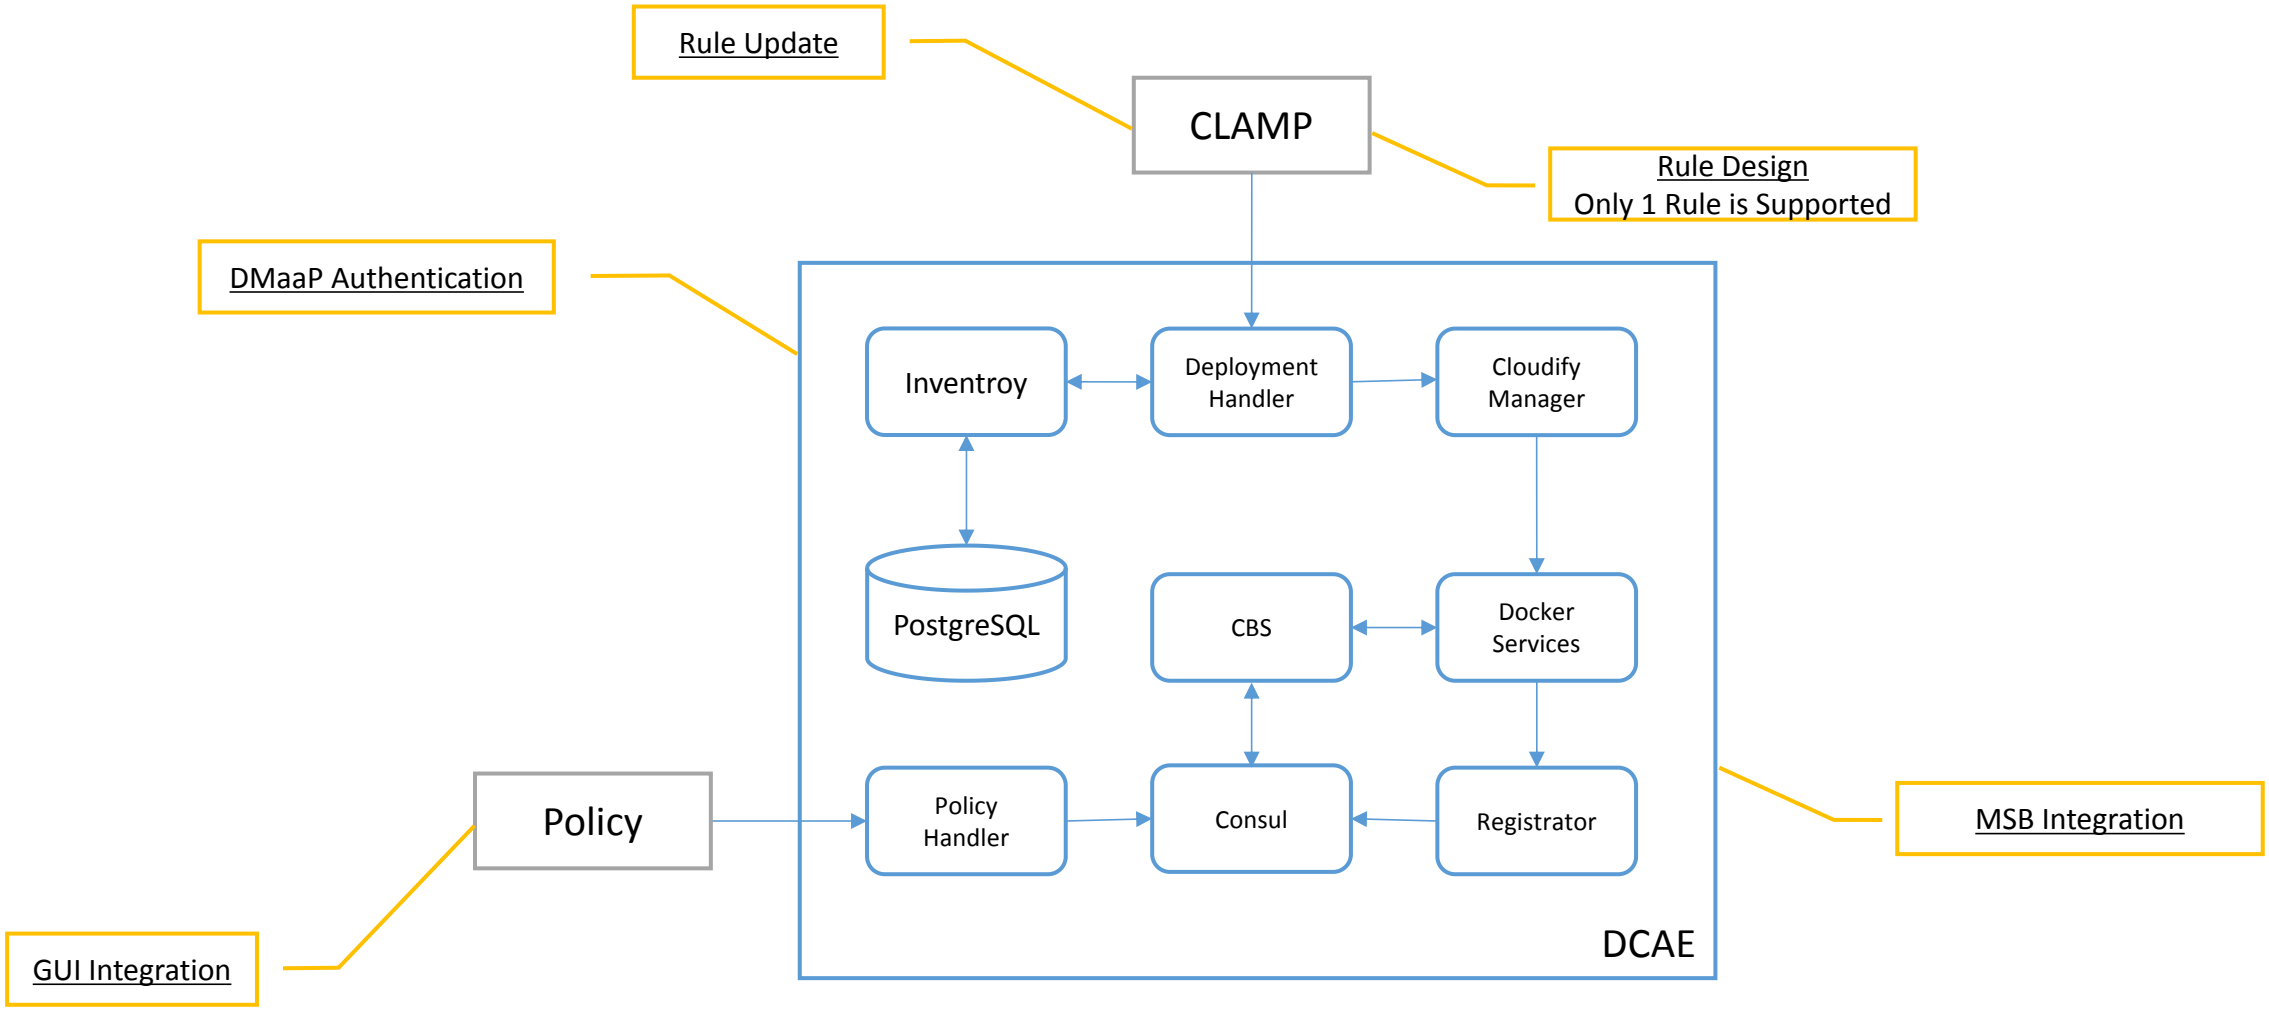
Supported Use Case

- vVoLTE

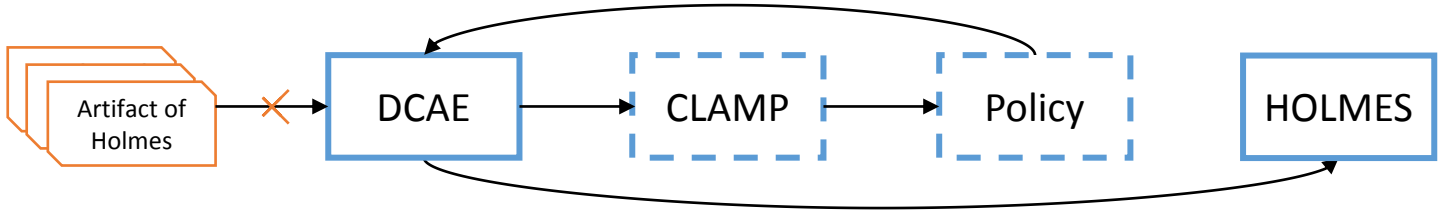
Status by the Release of Amsterdam



Status by the Release of Amsterdam



Beijing Release - Functionality Enhancement



Improvements Required

- Holmes is not onboarded into DCAE automatically.
- CLAMP does not support multiple rules editing or distribution for Holmes in R1.
- The rule design GUI of CLAMP (cockpit) is not user friendly and lacks flexibility.
- Whether to integrate the GUI of Holmes into the Policy portal? How?
- To support more use cases besides VoLTE.

Legend

Workflow's Broken

Imperfect Solutions

Beijing Release - Functionality Enhancement

Enhancement

- Automated Onboarding Process
- Integration with CLAMP/Policy
- To support more use cases

Overview of the Future of Holmes

A More Powerful & Intelligent Application

Introduce machine learning into Holmes.

- Manual composition of correlations rules? No!
  - Dig correlations out of a large number of history alarms using machine learning.
  - Convert the correlations into concrete rules automatically.
- Make Holmes a bussiness platform which provides some built-in machine learning algorithms.
  - Users could utilize the defaut algorithms for data analysis in an out-of-the-box manner.
- Make Holmes an extensable platform by providing a fexible way to add new components or algorithms as plugins.
  - New algorithms could be add into Holmes platform dynamically as plugins.

Overview of the Future of Holmes

A More Powerful & Intelligent Application

Introduce business intelligence into Holmes.

- Data mining
- Performance Analysis & Management
- Reporting

Overview of the Future of Holmes

An Application Supports Big Data Analysis

- Provide the functionalities to support big data based analysis, using DCAE (or other big data platform) as the data source.
- Dynamic scalability of the Holmes platform itself.

Thanks
