**Subject:** Vote for new committers in Multi Cloud project

Since the feedback window is closed about the Vote procedure and we all agreed, then we will move on accordingly. I will nominate each candidate one by one through email for Vote by current committers. Each committer should vote by replying to this email with +1 (support), or -1(object) and corresponding reasons before the specified deadline. Vote is both the right and the duty for each committer, so your prompt response is appreciated.

Hi committers,

I would like to nominate Liang Ke for his outstanding contribution to the R1 delivery.

Liang Ke is the top contributor on the gerrit stats (attached with this email). He delivered 4 most important features/functions of Multi Cloud in R1 including keystone proxy, integration with OOM and heat, simulator based system test framework and CSIT framework. He has good technique skills and relatively comprehensive coverage of project-related domains which make him capable to act promptly to unpredictable tasks and numerous bug fixes. His efforts and capability are key for our team to deliver Amsterdam release on time. He actively helped pair-testing and End2End integration tests and harvested good referrals from people he cooperated with.

Please vote before 12:00 AM Pacific Time, Wednesday Dec.6th.

Xinhui Li

**Subject:** Vote Procedures for committer promotion

Hi Team,

By consulting to TSC members and experienced project leaders - the suggested procedures for vote is below:

PTL will nominate each candidate, one by one, for vote by existed committers in emails. No matter one committer votes +1 or -1, who need to give reasons for community feedback and TSC approval reference.

Please feedback to me before 11:59 Pacific Time, Tuesday Dec.5th.

Xinhui
