39   <description>
40     This project build the ONAP CLAMP JAR that contains CLAMP back-end code and its UI part.
41
42     By Default "mvn clean install" command will execute also the unit tests
43     and the integration tests. The integration tests require a docker engine running.
44
45     If you want to skip the integration test you can by doing:
46     "mvn clean install -DskipITs=true"
47
48     For Spring it's possible to specify the application.properties location
49     "mvn clean install -Dspring.config.location=classpath:application-test.properties"
50
51     The application.properties contains the location of the CLAMP parameters files:
52     - org.onap.clamp.config.files.cldsUsers=classpath:/clds/clds-users.json
53     - org.onap.clamp.config.files.globalClds=classpath:/clds/globalClds.properties
54
