# ESR Discuss

scope

- Register/query/update/delete function of external system, such as VIM/VNFM/EMS/SDN Controller. (will not deploy the external system)
- Provide a portal to manage the external systems.
- check whether the external systems are reachable, and store the health status. (will not do the fault analysis)

External System means that the systems already exsist somewhere, but not included in ONAP, such as VIM/VNFM/EMS/vendor SDN controller
