Reply from 3GPP (ETSI) Legal: Use of 3GPP terminology in open-source code: copyright, licensing issues

---

If I recall the two questions are the following:

- The right use of the 3GPP terminology/names in ONAP's projects (independently from using 3GPP code or specifications) => concerning this point, it is possible to use the same terminology (this alone shall have no legal incidence) ; and it is indeed relevant to reinforce the use of 3GPP standards.

- The description of copyright/licensing for 3GPP code/files => could you please define how you would wish to make the 3GPP files available for the purpose of ONAP's project? Do you intend (1) to provide a link to 3GPP's relevant repository/website, (2) have copies of the files (unmodified) on ONAP's website site or (3) integrate the files in the project's release?

I thank you very much for this clarification and remain at your disposal,

Have a very nice day,

Best regards,
