

Discussion on initial proposal to start **documenting subset deployment**

- Subset deployment capability is important for service providers
- How to document? Initial idea
 - To document within ReadTheDocs architecture or usecase part
 - Starting small:
 - Documenting based on existing usecase teams' effort
 - **Dependency analysis among components/modules**
 - **Actual subset deployment**
 - Step0: update/complete this proposal
 - Step1: make a initial deck template for each usecase team
 - Step2: explain and ask for cooperation at usecase(requirement) subcommittee regular call
 - Step3: collect answer/info from usecase teams
 - Step4: Editorial works onto ReadTheDocs
- Next to address
 - Consideration toward such documentation continuity and enhancement
