

# **DCAE Platform Enhancements – Frankfurt Release**

Deven Panchal (AT&T)

Jack Lucas (AT&T)

Christopher Rath (AT&T)

Vijay Venkatesh Kumar (AT&T)

# Agenda

Microservice Onboarding and Design

Overview

Architecture

Deployment

Use case

Demo

Acumos Adapter

# Microservice Onboarding & Design (MOD) Drivers

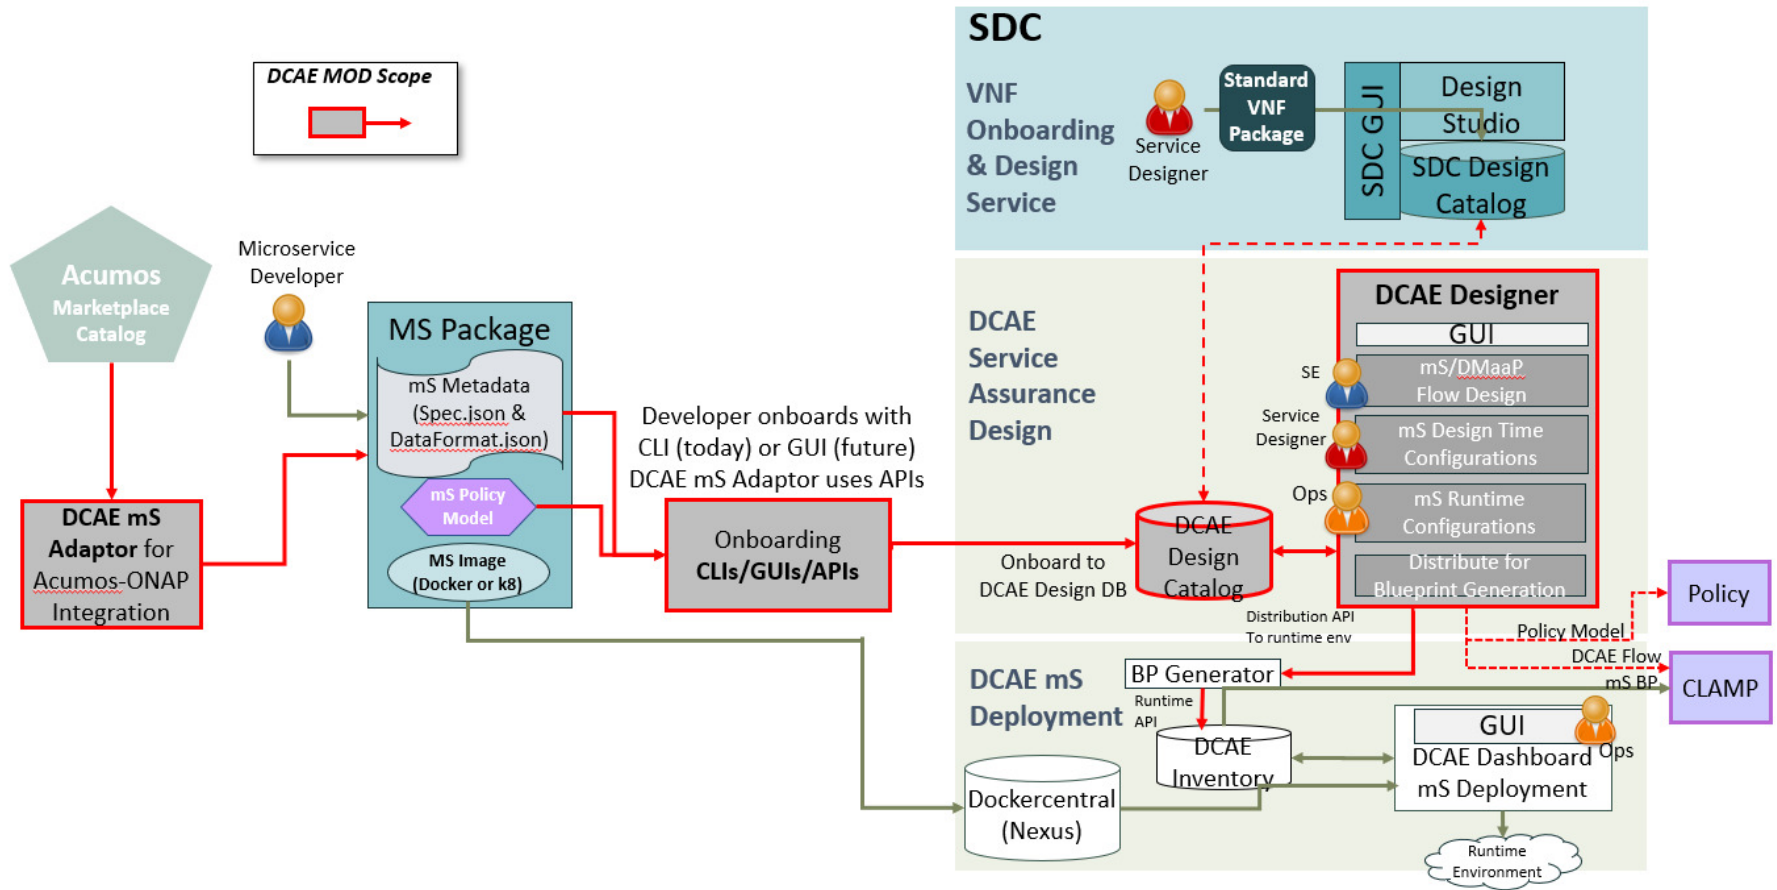

## SDC DCAE-DS Limitations

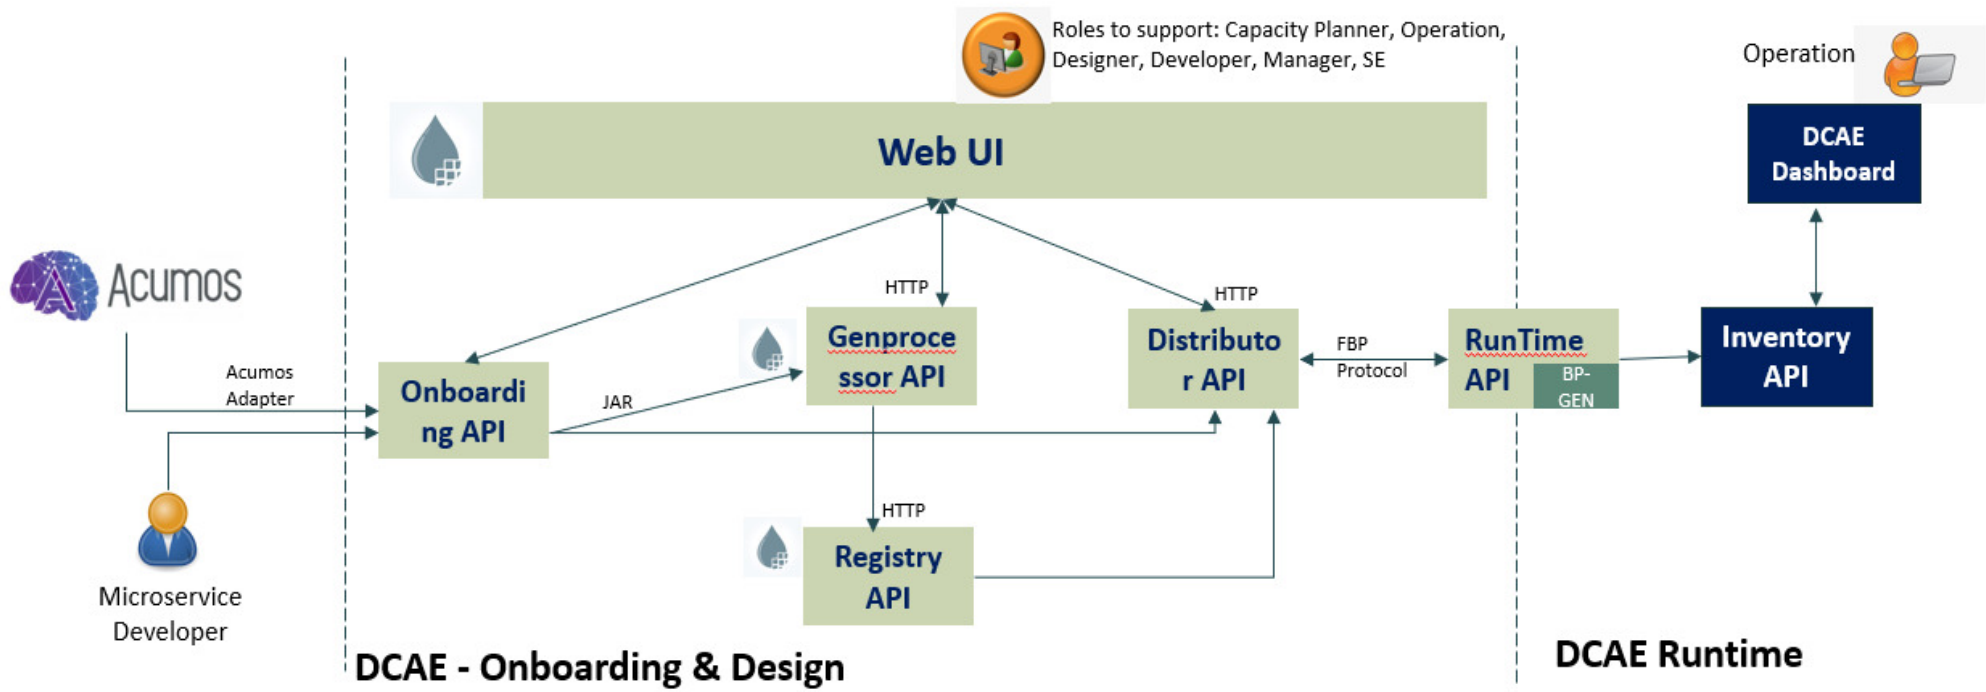

- Mismatched capabilities between SDC/DCAE-DS and DCAE mS Runtime platform
- No Service Assurance flow design
- mS developers upload handcrafted blueprint

## MOD Goals

- Provide simplified mS Onboarding, Service Assurance flow design, & mS microservice design time to support developers, service designers, and operations
- Provide catalog & data for DCAE microservice lifecycle tracking.
- Ensure consistency across all DCAE design and runtime platform component
- Auto-generate blueprint at the end of the design process (not onboarded before the design process)
- Support automated adaptation of ML model from Acumos to DCAE design & runtime environment

# Onboarding & Design Flow with DCAE MOD

# DCAE MOD Component Architecture

# MOD Deployment

- Installs with OOM
  - In `oom/kubernetes/dcaemod`
  - Six components, each with a subchart:
    - Design tool
    - Onboarding API (with an instance of common Postgres DB)
    - Runtime API (includes blueprint generation)
    - Nifi registry (stores flows)
    - Distributor API
    - Genprocessor
  - Components can be deployed individually via switches in `values.yaml`
  - Requires an Ingress
    - Brings UI components and APIs together at a single host
    - Requires settings in an overrides file
  - See <https://wiki.onap.org/display/DW/DCAE+MOD+User+Guide> for details

# Usecase

Onboard VES artifacts

dataformats  
Component spec

Onboard TCA-gen2 artifacts

dataformats  
Components spec

Create VES-Tcagen2 flow (binded through Dmaap – VES\_MEASUREMENT Topic)

Configure Flow parameters (optional)

Distribute VES-TCAgen2 flow to DCAE-Inventory

Trigger deployment via Dashboard

DEMO
