Subject: Requesting a vote for Krishna's committer promotion

Dear OOF Committers,

As we all know, OOF has contributed substantially to many use cases including service instantiation, PCI/SON, Change management and 5G Network Slicing. It would be essential for us to have committed engagement from folks who are actively contributing to the project, across releases.

In this regard, it will be wonderful if we can have Krishna promoted as a committer for the project, especially given his active involvement in OOF over the last year. Krishna has been contributing to multiple use cases including PCI/SON and Network Slicing use cases for the last two releases, and has shown a good understanding of the core codebases.

Here's the page I had created listing his contributions for the promotion request:

<https://wiki.onap.org/display/DW/Committer+Promotion+Request+for+%5BBOOF%5D+-+Krishna+Moorthy>

As required by the ONAP committer promotion process, please send in your votes as a response to this email.

Thanks,
Shankar.
