

# Developer Wiki

## LF RelEng Support Update

The Linux Foundation IT is migrating from email-based support system using Request Tracker to a web-based platform provided by Jira Service Desk. We are doing this in order to improve our level of service and your support experience.

**Starting Monday, June 17, please use [support.linuxfoundation.org](https://support.linuxfoundation.org) to open a ticket.**

Any support requests that are already open in RT will be preserved and completed there. Any new tickets created in RT will be automatically closed with a suggestion and instructions to use the new service desk procedure. Note that there may be a few growing pains as we go through this transition. More details on the procedure described in the attached "[Getting LF IT Help](#)" document.

**This wiki is for developers and users of ONAP, an open source software platform that delivers robust capabilities for the design, creation, orchestration, monitoring, and life cycle management of Network Function Virtualization (NFV) environments, as well as Software-Defined Networks (SDNs).**
