

# ONAP Developer Wiki

This wiki is for **developers** of ONAP, an open source software platform for the orchestration, management, and automation of network and edge computing services for network operators, cloud providers, and enterprises. Its real-time, policy-driven orchestration and automation of physical and virtual network functions enables rapid automation of new services and complete lifecycle management critical for 5G and next-generation networks.

If you are looking for documentation on administering or deploying ONAP, please head to our official Project documentation site: <https://docs.onap.org/en/istanbul/guides/onap-operator/index.html>
