# 2021-04-15 Doc project meeting

## Attending

Andreas Geissler  
Timo Perala  
Thomas Kulik  
Eric Debeau  
Chaker Al-Hakim  
Kenny Paul  

## Topics, Notes, Status and Follow-Up Tasks

<table>
<thead>
<tr>
<th>Topic</th>
<th>Notes / Status / Follow-up</th>

<tbody>
<tr>
<td><strong>AGENDA FOR TODAY</strong></td>
<td>Todays meeting is dedicated to have a discussion with the architecture team about related documentation tasks and the Architecture Navigator</td>
</tr>
</tbody>
</table>
| **ArchNav**            | Short presentation of ArchNav functionalities & targets (current, planned)  
                         | by Chaker Al-Hakim  
                         | LFX Mentorship Program (how to sync with doc activities)  
                         | Kenny Paul  
                         | Schedule: end of may onboarding done, results until end of augus |
|                        | The Mentorship Program should help to coordinate the required activities needed to find the best solution to integrate the ArchNav itself or similar functionality (by the means of the Wiki and RTD). The Architecture Subcommitee as well the Doc Team are requested to support this activity.  
                         | Regardless how we realize this kind of navigation, we agreed on not to link Wiki content in formal (RTD) documentation.  
                         | Further clarification is needed how the automated link generation via JSON objects work in the ArchNav. |
|                        | ? Possible alternatives to ArchNav, Pros and Cons ?  
                         | not discussed; expected result of the Mentorship Program |
| **Next Meeting**       | We agreed to dedicate also the next meeting (april, 22th) to the architecture team and related documentation tasks. Chaker Al-Hakim will join. |
| **POSTPONED TO NEXT DOC WEEKLY** |                     |
| **Architecture documentation tasks** |  
                         | Tasks in context of the ONAP release lifecycle  
                         | Required improvements (e.g. gerrit account?)  
                         | Required help |
| **Refresh for architecture docs** |  
                         | Status of proposed changes; see comments by Sylvain Desbureaux (E-Mail 10. June 2020 13:22 or gerrit change) |
| **Wiki 2.0 - New Task Force** |  
                         | Led by Timo Perala, Ranny Haiby. Goal: Redefine the structure of the ONAP wki, to identify the relevant pages, to create onboarding for newbies, etc. |
| **OPTIONAL (IF TIME ALLOWS)** |                     |
| All                    | Collection of topics not started  
                         | Dedicated repo for every subcommittee (that creates and maintains formal ONAP documentation)? To be discussed.  
                         | Fix ReadTheDocs starting page to the last official release (and not 'latest')  
                         | add tracking information to the new docs tracking page (currently WIP!!) To be discussed. |
The team will investigate further with the OOM team on how to enable a non-voting job for warnings.

Check why closes ticket show up even when the filter is set to "Open" or "In progress"

All done for the doc project (date in the release note might need to be updated). Still lacking some project updates

For future collaboration and facilitation we will ask for a time slot in the arch subcommittee meeting to inform and educate how to work with docs.

David McBride will join to discuss this further.

Many links are managed in RTD

- local links within a repo
- inter-project links using inter-links from sphinx
- links to code repo
- external links to web sites

There is a problem when a documentation links to a repo => the branch is not indicated. As result, the link points to the latest release

Proposition to provide guidelines to be then presented for PTL

Many links are broken => need to include a test in JJB and provide information about broken links

Feedback has been given, positive output. Next step, bring to PTL

Still required from the project to test
Create project docs manually with gerrit in case a project has branched but not changed any doc file in the new branch afterwards.

Andreas Geissler showed a solution to create project docs manually within gerrit in case a project has branched but not changed any doc file in the new branch afterwards. There are extended rights in gerrit needed [1].
