Meetings

SDNC Weekly Meeting

UTC 1:00 PM - 2:00 PM
PST 6:00 AM - 7:00 AM
EST 9:00 AM - 10:00 AM
https://zoom.us/j/330824945

Zoom meeting. Join from PC, Mac, Linux, iOS or Android: https://zoom.us/j/330824945 Or iPhone one-tap (US Toll): +16465588656,.330824945# or +14086380968,.330824945# Or Telephone: Dial: +1 646 558 8656 (US Toll) or +1 408 638 0968 (US Toll) +1 855 880 1246 (US Toll Free) +1 877 369 0926 (US Toll Free) Meeting ID: 330 824 945 International numbers available: https://zoom.us/zoomconference?m=RTtS256rDo_7Utklznpz4jzZNmjTbO

Meeting Minutes

SDNC APIs

Link to SDNC APIs Page (Included below)

- Incoming APIs:
  - RESTCONF APIs:
    - Healthcheck : used to verify health of SDNC.
    - Swagger JSON : SLI-API(2016-11-10).json (Readthedocs : SLI-API)
• Generic VNF API: API used to request resources for VNFs (vDNS, vFW, and vCPE use cases)
  • Swagger JSON: VNF-API(2015-07-20).json (Readthedocs: VNF-API)
• GENERIC-RESOURCE-API: used to assign resources and create networks for VoLTE and vCPE use cases.
  • Swagger JSON: GENERIC-RESOURCE-API(2017-08-24).json (Readthedocs: GENERIC-RESOURCE-API)
  • Application Interface Document (Updated for Beijing): Generic_Resource_ONAP_AID.docx
  • Blueprint for Capability Contribution and integration to Generic Resource API: Blueprint for Capability Contribution and integration to Generic Resource API.docx

• SDC client: used to listen for distributions from SDC. This is used to receive and consume TOSCA models

• DMAAP listener: used to listen for event notifications from DMAAP.
  • For Amsterdam release, the vCPE use case posts a notification to DMAAP that alerts SDNC when a BRG receives an IP from DHCP. The DMAAP listener then will invoke the GENERIC-RESOURCE-API to set up a WAN connection for that BRG.
  • For Beijing release, SDN-C will also subscribe to an additional topic on DMAAP to receive LCM events, which will in turn invoke the LCM API.

• New for Beijing release:
  • LCM (Lifecycle Management) API - used in Change Management and Manual Scale Out functional requirements to allow SDNC to process lifecycle events for L1-L3 VNFs.
  • The same rest api northbound is used in both SDNC (L1-L3) and APPC (L4-L7) - auto-generated from LCM-API.yang but the “action” parameters that can be sent via that API - some don't work on SDNC like start/stop/restart/evacuate - others like ModifyConfig will work on SDNC
  • See APP-C LCM API guide for additional information

• Outgoing API:
  • A&AI: SDNC will read/write objects to A&AI. The base aaa-service class is capable of reading/writing any object defined in A&AI XSD schema. The directed graphs for the use cases will drive which specific objects are read/written.
  • External SDNC controllers: SDNC will interface to external SDNC controllers to create underlay/overlay networks (for VoLTE). These external controllers expose a RESTCONF interface, which SDNC will invoke using its restapi-call-node interface.

APIs used by client projects:
