

NSI/NSSI Selection based on resource occupancy levels

Overview

For every new shareable slice creation request, OOF checks whether any existing slice can be reused.

OOF selects the suitable NSI/NSSI for reuse based on the resource utilized for the existing slices. To decide the reusability of slices, it needs to know the remaining capacity available for those slices.

OOF depends on DCAE (Slice Analysis MS) for the relevant details.

Slice analysis MS in turn requests DES (Data Exposure Service) for the PM data for a specific time interval, converts it into configuration data, aggregates the configuration data for the slices and returns it back to OOF.

With this current configuration data, OOF further checks against the actual requirements of these slices from the service/slice profile and finds the occupancy level.

The interface details between OOF and Slice Analysis MS are below.

API Definition

Get utilization of Slices

Interface definition	Description
Content-Type	application/json
Operation	GET
URI	/api/v1/slices-config

Request Body

Attribute	Required	Type	Description
slicelidentifiers	Y	List<String>	Identifier for the specific type of slices
configParams	Y	List<String>	configuration fields expected from Slice Analysis MS

Request Body - Sample

```
{  
    "sliceIdentifiers": [  
        "7e000ddc-7ba1-4fdb-a7ce-8f0a65ab3282",  
        "cb51e744-bfcf-4188-885a-e3e3c51ed53e"  
    ],  
    "configParams": [  
        "dLThptPerSlice",  
        "uLThptPerSlice",  
        "maxNumberOfConns"  
    ]  
}
```

Response Codes

Code	Description
200	Data returned successfully
400	Bad Request (Error in request attributes)
500	Internal server error

Response Body

Attribute	Required	Type	Description

sliceConfigResponse	Y	SliceConfigResponse	Response body containing the configuration details for the requested slices
---------------------	---	---------------------	---

SliceConfigResponse - Sample Response

Response Body - Sample

```
{  
    "sliceConfigDetails": [ {  
        "sliceIdentifier": "5d9b3293-fa20-4776-bb41-92ba5e384419",  
        "aggregatedConfig": {  
            "dLThptPerSlice":27,  
            "uLThptPerSlice":30,  
            "maxNumberOfConns":300  
        }  
    },  
    {  
        "sliceIdentifier": "e316f4b2-01fa-479a-8522-64fe9c0c2971",  
        "aggregatedConfig": {  
            "dLThptPerSlice":40,  
            "uLThptPerSlice":25,  
            "maxNumberOfConns":400  
        }  
    } ]  
}
```
