  - Attempting to replicate functionality in OSC OAM/NONRTRIC/SIM demo - based on OSC charts.
    - Mainly updating charts etc.
    - Certs need updating
    - Will be testing in ONAP WindRiver lab - setup etc. Might be a good place to collaborate.
- John Keeney Any update on how to reuse OSC & other external components?
  - @Christophe, will be challenging in OOM, & need to reuse structure & some charts from OOM
- John Keeney Any ideas where SMO would be different from "Full ONAP"
  - @Christophe: Plan to start with OSC charts/flavour ... then depends on Usecases ...
  - Hope to be able to make use of the override files to create different flavours .. aiming for something similar to OSC version
    - Ref [Closed loop use case & "D" Release - Closed Loop Use Case: Simulation of O-RU and O-DU & "D" - Closed Loop Use Case](#)
- John Keeney Probably need different versions for different usecases
  - @Christophe ... OOM have this same idea to have multiple flavours. Discussion gets broader when non-ONAP components are added.
- @NK Shankar ... Should also consider SON and Slicing usecases.
- John Keeney Recall that the OSC D release usecase is not real world ... and will mature in coming releases. Currently mostly treated as an integration requirements driver
  - Ref [Closed loop use case & "D" Release - Closed Loop Use Case: Simulation of O-RU and O-DU & "D" - Closed Loop Use Case](#)
- @Christophe @NK Shankar Need to consider diversity of DCAE components used. Also need to figure out how different simulators could co-exist.
- Lets continue discussions on Friday Call?

## INFO from Christophe - 2021-06-30:

Just a few notes:

- We have agreed with ONAP and other members of O-RAN SC to keep an ad-hoc call on Friday to discuss technical details for now (will remove this meeting once all details are sorted out and use the joint meeting to report status)
- Main comment from John is that we cannot consider an SMO deployment without having a way to deploy Non-RT-RIC as well as ONAP components (hence a debate on how this should materialize : extend OOM? )
- We have progressed on the POC in the meanwhile, Sebastien had an idea and has pushed a small repository on github to show what we are doing for now to create a unique installation for O-RAN, trying to implement the following idea:
  - Started from IT/DEP repo, containing some Helm charts for O-RAN (including Non-RT-RIC)
  - Seems an embryo of using ONAP charts to deploy SMO components but sounded like a fork of ONAP charts
  - Instead of copy pasting OOM charts, he create a git submodule referring to oom ONAP charts repo (to keep ONAP untouched)
  - Rework the O-RAN charts to map them to the OOM structure (like OOMized O-RAN charts)
  - Try and build (created some makefiles, inspired from ONAP) then push them to a single chart repository
  - Merged ONAP override and O-RAN override to have a single file
  - Created an Install script to deploy the charts in a single Namespace
  - ... it worked more or less

We plan to show that maybe on Friday call (<https://wiki.onap.org/pages/viewpage.action?pageId=103422272>)

## 2021-07-07:

way forward

- release helm repo by OOM should be created
  - (Added later: John Keeney Also asked about getting a helm chart repo for OSC. <https://lists.o-ran-sc.org/g/discuss/message/331>)
- demo was shown last Friday how it could look like
- next step
  - sample overwrite files

## 2021-07-14:

- <https://github.com/gmngueko/oran-deployment/pull/1>
- in non-overwrite helm only docker from "released" nexus should be included...

## 2021-07-21:

- from [John Keeney](#) LFN ticket required to put helm into nexus
- control about helm from different project
