Jorge Hernandez	Set up lab for Ajith with honolulu official Regression tests with snapshot and configuration in pfpp tenant (honolulu base + snapshots)	AAF generated certificates have old names in OOM, and incorrect names for drools, there's no side effects as only used for telemetry, but better clean up entries and fix them. Set up the other lab policy-k8s with master (pfpp in honolulu)	
Jim Hahn	Help with issues raised by Perapalla Maneesha. The issues seem to be password issues to do with certificates.	Looking at some more JIRAs, POLICY-3259 where XACML gets into a crash loop, seems to be related to DMaaP not having updated a keystore. Another one is POLICY-2874 XACML-PDP tests running slowly.
