

Locking Mechanism.

Priority	4
Summary	Support of locking mechanism that can prevent different parts of ONAP from accessing
Use Cases	Change Management
R1 Status	Not supported
R2 Status	

In order to allow for coordination between different parts of the platform, mechanisms that provide that the same resources is not being modified by more than one source at a time is needed.

It is unclear if locking is something that should be in A&AI or is part of the Policy Engine (Perhaps this can be posed as a question to Arc Subcommittee?)
