traversal mS

TBD

search-data-service mS

Setup:

- Launch the search-data-service docker container
- Launch the elasticsearch docker container

Test Cases:

- PUT index (create a new index)
- PUT document (create a new document under the index)
- GET document (retrieve the document)
- DELETE document (delete the document)
- DELETE index (delete the index)

Teardown:

- Shut down the search-data-service docker container
- Shut down the elasticsearch docker container
