OpenStack Version Discussion Meeting Minutes

Meeting minutes:

1. We have agreed that from longer term the dependency for Identity v2 needs to be resolved since the later version of Openstack removed it completely instead of just deprecating it.
2. And we'll test two possible paths in parallel: one is changing the OpenStack config in Integration Lab to see whether it could satisfy DCAE's requirement; another one is leveraging multicloud as a media layer for it.
3. The current Integration lab is Newton; we cannot afford to downgrade to Mitaka at this moment since it will cause a lot of extra works, including lost all our accounts, …

Meeting action items:

1. Lusheng will document on wiki the steps and requirements from OpenStack
2. Stephen will talk back to Intel/Windriver lab to see whether they could meet it. (for path 1)
3. Lusheng and Bin Yang will discuss the details of APIs and do some pair testing in Integration lab for the path 2.
