

OOM Meeting Notes - 2017-11-08

VFC work needs to be assigned

OOM-372 assigned to FMO (OPNFV needs DCAEGEN2 working as well - will coordinate with David B. and Helen)

branching? new code for beijing should not be in master

Some developers can create a branch themselves - if you see a "create branch" button

<https://gerrit.onap.org/r/#/admin/projects/oom,branches>

Follow up with david to create branch for beijing

new sprint with David

break the tarball news: Mandeep: auto-updating config

 **OOM-344** - Break the configuration tarball per application CLOSED

sharing k8s config map - pods must be in the same namespace - all of oom in single namespace - will block all configuration epics

This is a k8s restriction on config-maps not sharable outside the namespace

Introduce WIKI Design page for epics on design issues - like for example the shared config above that Mandeep is looking at OOM-344

Roger, David, We need to declare OOM and HEAT ready for release at the same time

We will need to test both systems within the same 24 hour period

Since monday - only changes to fix the vFW are allowed to be merged - so theoretically we should

Need wiki for F2F - link to  **OOM-392** - F2F Dec 2017 Developer Conference Topics - OOM CLOSED

Review Carrier grade page

Comply to RC2 - David

Vote to make Borislav and official committer
