

How to work through Corp Firewall/Proxy

For working the ONAP flow through Corporate proxies. Here are a few guidelines

Step-by-step guide

On the platform /etc/environment

1. export http_proxy="<http://proxy.att.com:port>"
export https_proxy="<http://proxy.att.com:port>"
sudo -E abc_install.sh where is the ONAP component
2. On each docker install script

```
export http_proxy="http://proxy.att.com:port"  
export https_proxy="http://proxy.att.com:port"
```

```
sudo -E dockerabc_install.sh
```

3. On Java install.xml scripts add the proxy

```
<proxies>  
<proxy>  
<id>optional</id>  
<active>true</active>  
<protocol>http</protocol>  
<host>proxy.att.com</host>  
<port>1234</port>  
<nonProxyHosts>localhost,127.0.0.1,*.att.com</nonProxyHosts>  
</proxy>  
  
<proxy>  
<id>optional</id>  
<active>true</active>  
<protocol>https</protocol>  
<host> proxy.att.com </host>  
<port>1234</port>  
<nonProxyHosts>localhost,127.0.0.1,*.att.com</nonProxyHosts>  
</proxy>  
</proxies>
```
