

# OOM Meeting Notes - 2018-03-14

## Notes

- Discussion open
- Segment on documentation [Roger Maitland](#)
- helm chart work review
- Redhat is joining
- M4 close around 28th march - architectural changes coming in (including DCAEGEN2 when released, SO, SDN-R (new component))  
integration of this work will be around code freeze time unless we get ahead of the changes
- SDC changes to review
- all devs don't post in draft mode when in final review
- Borislav on 722/733
- appc not shifting to mariadb yet for beijing - long term with galera
- new b\* deployment is based on helm charts - ie: mariadb (single configuration of a cluster = galera) - will work with teams just after b\* release
- mariadb question: ports? - need container name (inside each pod) collision strategy (values.yaml files, cover off chart.yaml)
- dmaap because it is common needs special handling - policy decision point needs to listen on dmaap
- JIRA - epic required for above
- AAFi integration offline with [Roger Maitland](#)
- **Welcome Red Hat** [Tal Liron](#) and [Frank Zdarsky](#)

## Other notes

- Reviews in progress/coming in
- <https://gerrit.onap.org/r/#/q/status:open+oom>
-  **MULTICLOUD-151** - Logging Enablement CLOSED
- Minor security review of OOM on nodeports - recommendation is to do the same cert/user/pass like aai-service - project will implement
- security team is working with AAF - raised container issue for
-  **OOM-324** - AAF Service Container logging error CLOSED
-  **AAF-470** - AAF container failure tracking for OOM-324 CLOSED
- IBM is bringing up OOM (in addition to existing Azure and AWS teams) - they have a blog and will transition it to onap <https://developer.ibm.com/code/howtos/get-onap-up-and-running-on-icp/>
- Prep for M4 code freeze
