Logging Release Management

- Logging Release Artifacts plan

Release process is detailed in How to release CCSDK sli artifacts

Logging Release Artifacts plan

- remove SNAPSHOT tag, ask LF to move built artifact (1.2.2 in Casablanca) to release nexus2, change to new 1.4.0-SNAPSHOT, change dependent projects to use the new 1.4.0-SNAPSHOT
    - All above done in sequence for
    - plan
      logging-analytics (root) (pom)
      + logging-reference (pom)
      + logging-demo
      + logging-docker-root
      + logging-kubernetes
      + logging-library
      + logging-mock-service
      + logging-slf4j
      + logging-sl4fj-demo
