

# SDC Runtime Catalog Project scope change

- 1 Project Name:
- 2 Project description:
- 3 Scope:
  - 3.1 Management Objects:
  - 3.2 Functions:
- 4 Architecture Alignment:
  - 4.1
  - 4.2 RT-Catalog Storage
- 5 Other Information:
- 6 Future RTC Implementations
- 7 Key Project Facts:

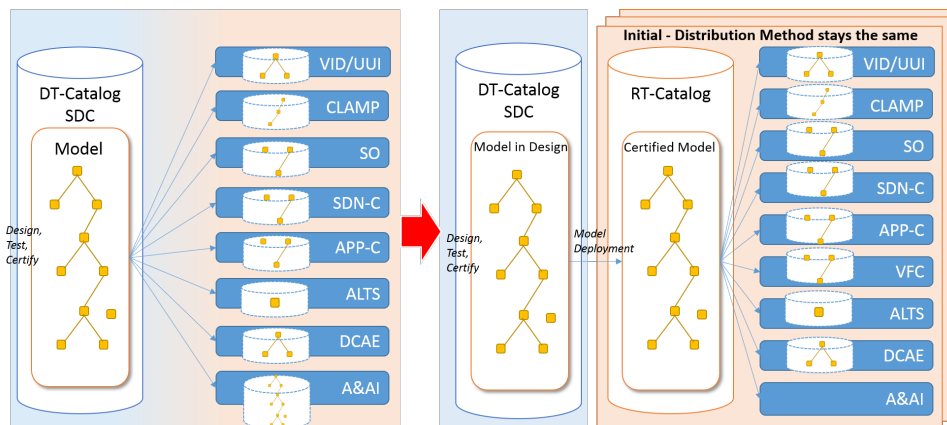

## Project Name:

- Proposed name for the project: SDC Runtime Catalog
- Proposed name for the repository: sdc/rtc

## Project description:

The SDC RT-Catalog project aims to provide unified catalog management in ONAP runtime environment.

### • Problem Resolved

### ◦ Benefits

- Separation of concerns – Model Design vs. Runtime Using
- Simplification of Design time to Runtime model distribution
- Consolidation of Runtime Data storage and management

## Scope:

### ▪ Management Objects:

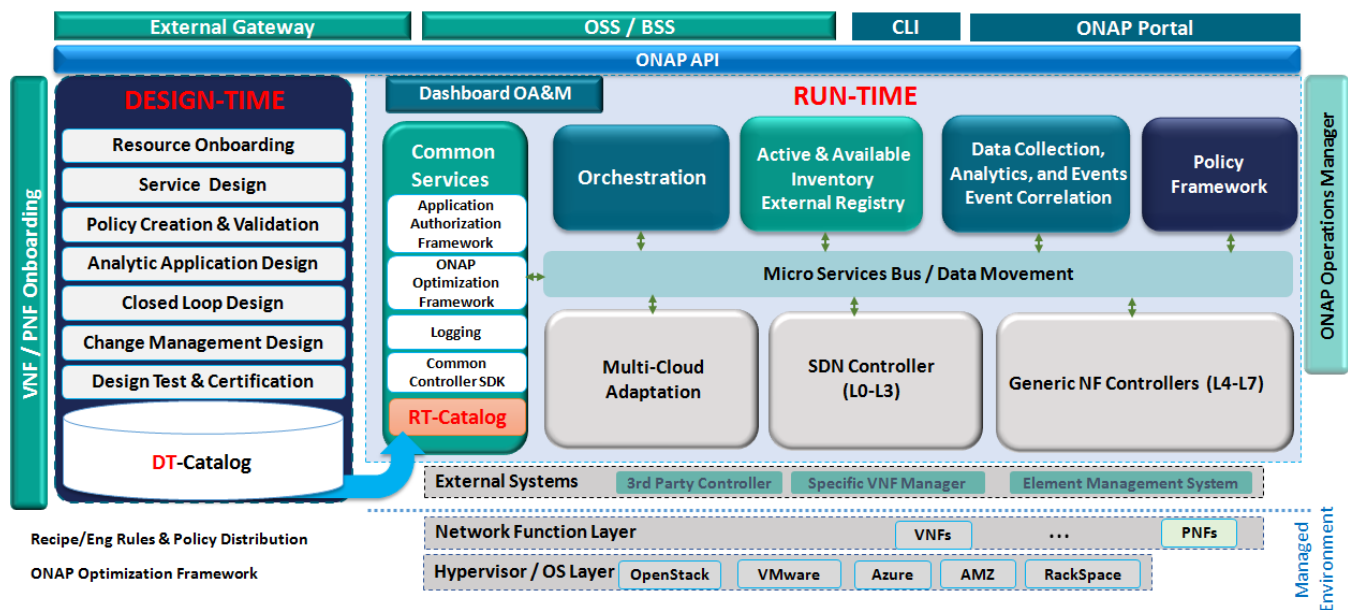

All Certified Design Model

Consistent definitions with SDC Design Catalog

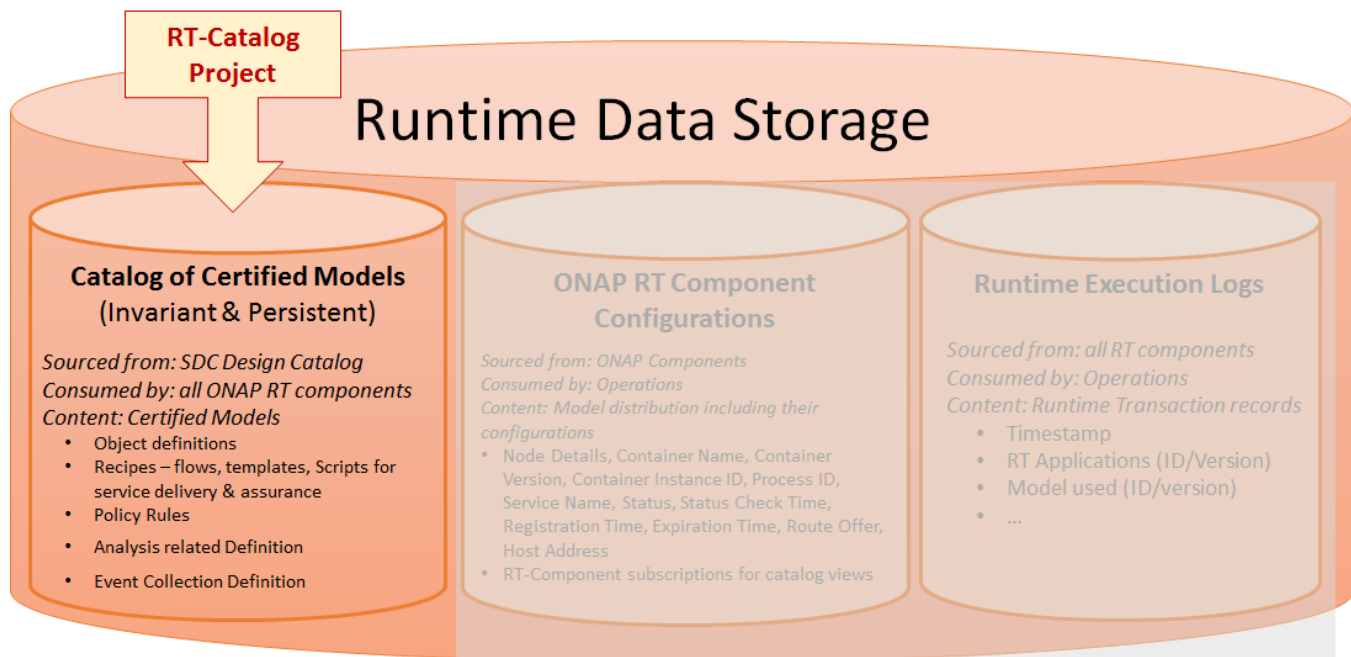

### ▪ Functions:

- Provide RT-catalog GUI, storage and management functions, including CRUD, distribution.
- Provide RT-catalog data status & Tracking
- Provide search capacity for fast access across run-time catalog data
- Provide portal for the Human Interface
- Provide S3P related capacity for RT-Catalog

## Architecture Alignment:

#### • RT-Catalog Storage

What other ONAP projects does this project depend on?

- SDC(DT-Catalog)
- RT-Components(UI\SO\VFC\APPC\Policy\.....)
- Common service(MSB/DMAAP/Parser.....)

How does this align with external standards/specifications?

- APIs/Interfaces - REST/PubSub
- Information/data models - Swagger JSON

Are there dependencies with other open source projects?

- APIs/Interfaces
- Integration Testing
- etc.

## Other Information:

link to seed code (if applicable)

Vendor Neutral

- if the proposal is coming from an existing proprietary codebase, have you ensured that all proprietary trademarks, logos, product names, etc., have been removed?

Meets Board policy (including IPR)

*Use the above information to create a key project facts section on your project page*

## Future RTC Implementations

- Include additional management objects: Besides the existing service-specific models, additional certified service independent designs (e.g., Data Dictionary, generic workflows, generic policy models, etc.) will be included for deployment from SDC to RTC.
- Implement Data-Centric ONAP architecture to include RTC in the common data layer
  - Utilize platform common data storage and management functions
  - Pivot RT-component's RTC subscription mechanism by providing RTC view & self-subscription GUI
  - Provide RTC data search, status, tracking, logging
