

# DCAE-Design Studio deployment

## Prerequisites

Deploying SDC on a Linux VM for Development ( [link](#) )

## Initial Setup

1. In folder **/data/scripts/** place the following script from dcae repo - [sdc/dcae-d/dt-be-main](#)

- **dcae\_docker\_run.sh**

2. Provide execution permissions to the scripts

```
chmod 755 /data/scripts/*
```

3. As 'root' user, launch the following script to test the setup is working (it will pull dockers from the LF repo and start them)

```
/data/scripts/dcae_docker_run.sh -r 1.2-STAGING-latest
```

on script completion, you will see a successful health check. Depending on you VM
