

# Casablanca SDNC Security/Vulnerability Report

This table represents the known exploitable and non-exploitable vulnerabilities in third party packages used in the project.

**Note :** the shaded lines in the table below are vulnerabilities inherited from upstream projects on which we depend. The direct dependency is listed in the Impact Analysis section. Many of these are from the OpenDaylight Oxygen distribution, on which much of SDNC is based. These vulnerabilities will be reported as CVEs to the OpenDaylight project so they can address them.

There are several vulnerabilities in used libraries that are noted. To mitigate the risk of exposure it is recommended that secure network design is used to avoid any unnecessary access to SDNC.

Repository	Group	Impact Analysis	Action
sdnc/apps, sdnc/oam	ch.qos. logback	<b>False positive</b> : only applies if logs are written to sockets (e. g. syslog), which does not apply in our case	No action needed
sdnc/oam	com. fasterxml	<b>False positive</b> : only applies if data format extension is used, which does not apply	No action needed
sdnc/oam	com. fasterxml	Inherited from OpenDaylight	Must be addressed in upstream OpenDaylight project
sdnc/apps, sdnc /northbound	com. fasterxml. jackson. core	Fixed in version 2.8.6	Will be updated to 2.8.9 in maintenance release (See <a href="#">CGSDK-765</a> - Upgrade jackson version to 2.8.9 <span>CLOSED</span> )
