Casablanca Maintenance Integration Security/Vulnerability Report

This table represents the known exploitable and non-exploitable vulnerabilities in third party packages used in the project.

Repository	Group	Impact Analysis	Action
oparent	commons-beanutils	False Positive: oparent does not actually use or include any of the flagged artifacts. The oparent CLM job shows what the CLM results would be for the downstream projects that use the oparent standard 3rd party library versions.	No action
oparent	org. codehaus. jackson	Same as above	No action
oparent	xerces	Same as above	No action
