

# How to Build AAI Docker Images

For the following AAI microservices: **resources**, **traversal**, **graphadmin**, **catcher**, and **schema-service**, all of the images can be built via this:

```
mvn -Pdocker clean install -DskipTests -Dcheckstyle.skip=true
```

Dockerfile is located at

```
src/main/docker/Dockerfile
```

For other AAI microservices (ex. babel, model-loader, search-data-service, data-router, gizmo, etc) consult the README.md files in the top directory of each of the repos.

Most are built with

```
mvn clean install

docker build -t onap/{microservice-name} target
```
