Applications may run as root within a container. The process ID of a container must not run as the root ID with the exception of containers supporting ONAP features that require the container to run as the root ID. Containers may run with root privileges. Project containers that run as the root ID must document this in the release notes along with the functionality that requires the container to run as the root ID. <p> AAI-2472 - Change to use non-root user for containers CLOSED</p>

Recommended to focus on the resources repo for understanding the core function of AAI.
