

ONAP Service IM Minutes 20190522

Participants

Borislav Glzman Kevin Scaggs Xu Yang Timo Perala Andy Mayer Fei Zhang Bob

Agenda

[Enhanced Service Information Model for Nested and Shared Services](#)

Minutes

Kevin shows his work for the modifications of this model, mainly generalize filter, serviceConfigurableProperties and serviceProfile to the common level.

1. filter
 - a. Use SelectionCriteria in common level to extend the filter.
 - b. filterRule in ServiceCompositeDescriptor seems redundant that the relationship has already been included in the association related to the class filter.
 - c. Can SelectionCriteria be used to VNFD/PNFD? Need detailed example to show if it is necessary.
 - d. Detail diagram will be uploaded to [Enhanced Service Information Model for Nested and Shared Services](#).
2. serviceConfigurableProperties
 - a. Kevin show the idea of putting the data type "serviceConfigurableProperties" at common level, then is "configurableProperties"
3. serviceProfile
 - a. Kevin proposed to put this also in common level, but not mature and need more discussion.
 - b. One question is, if so, what is the difference between configurableProperties and propertiesGroup?
4. Borislav can bring back the latest progress in modeling to SDC, and may update the description where needed.
