Rainy day scenario - PNF is sending registration request to ONAP where required AAI entry is not present:

PNF PNP Flow

Sunny day scenario - PNF is sending registration request to ONAP where required AAI entry is prepared by SO workflow:

PNF PNP deployment diagram

PNF PNP hardware requirements

- ONAP standard ONAP instance located in Wind River lab

8 GB of RAM 32 GB of HDD

PNF PNP test cases

High-Level descriptions

ld.	Test Case Name	Test Case Description
T01	Create and distribute service which contains PNF based on imported VSP	Verification if in VID is present PNF enabled service.
T02	PNF registration accepting when AAI entry created in advance	Verification if PNF resource registration is done properly when correct AAI record (based on <i>correlationID</i>) is present before first <i>InventoryQuery</i> is done by PRH. Verification if AAI entries: <i>ipaddress-v4-oam</i> and <i>ipaddress-v6-oam</i> are updated correctly based on <i>pnfRegistration</i> message contents.
T03	Delete pnf service and pnf resource	
T04	Delete pnf service instance and reasign pnf resource to another service instance	
T05	PNF registration rejected	Verification if PRH drops the <i>PnfRegistration</i> request when no AAI entry exists for the <i>corr elationID</i> . AAI entries shall not be created by PRH.
T06	PNF registration accepted when AAI entry is created using AAI API (without SO instantiation)	Verification if PNF resource registration is done properly when correct AAI record (based on <i>correlationID</i>) is present - created using AAI API Verification if AAI entries: <i>ipaddress-v4-oam</i> and <i>ipaddress-v6-oam</i> are updated correctly based on <i>correlationID</i> .

and fill all mandatory parameters

Те stin g Ste ps

- 7. Add Entitlement Pool and fill all mandatory parameters
- 8. Add Feature Group fill all mandatory parameters and add already created Entitlem ent Pool and License Key Group
- 9. Add License Agreement fill mandatory parameters and add already created Feature Group
- 10. Press Submit button and next COMMIT & SUBMIT button
- 11. Navigate to **ONBOARD** tab
- 12. Click on CREATE NEW VSP
- 13. Fill all mandatory parameters:
 - a. select Vendor defined in already created VLM
 - b. Name will be used in next stepsc. in **ONBOARDING**
 - PROCEDURE select Network Package
- 14. Click on warning under License Agreement
- 15. Fill Licensing Version, License Agreement and Feature Groups from already created VLM
- 16. Click on Overview from left menu and press SELECT FILE button.
- Select attached pNF.csar file from your PC
 Press Submit button
- and next COMMIT & SUBMIT button
 19. Navigate to Home tab
- 20. Click on **IMPORT** button
- and select IMPORT
- 21. Select previously created VSP and press IMPORT VSP button
- 22. In newly opened window yoiu can moduify PNF name.
- 23. Next click Create and Ce rtify button
- 24. Next press **Certify** button . Put comment message in **Certification confirmation** pop-up and press **OK** button
- 25. Navigate to SDC tab / H OME menu
- Click on ADD + button and select Add Service
 In HOME > Create new service > General page fill all mandatory fields (change service type from default a'lacarte to macro) and press Create
- button in right top corner 28. Go to **Composition** in left menu
- 29. In search box find crated PNF using its name

- 1. User is logged in
- 2. SDC application is open
- 3. ONBOARD CATALOG is visible
- 4. New License Model window is present
- 5. All mandatory parameters are fulfilled
- 6. License Key Group is added
- 7. Entitlement Pool is added
- 8. Feature Group is added
- 9. License Agreement is added
- 10. VLM is submitted sucesfully
- 11. VLM is visible
- 12. New Software Product window is present
- 13. All mandatory parameters are fulfilled
- 14. Licensing Version, License Agreement and Feature Groups and warning is not present
- 15. Licensing Version, License Agreement and Feature Groups are defined
- 16. Select file window is opened
- 17. File is selected
- 18. File is sucesfully uploaded and VSP is submited
- 19. Home tab is opened
- 20. Import VSP window is presnet with list of dubmited VSPs
- 21. Previously create VSP is imported as VSP and Create window is opened
- 22. All modifications are present
- 23. PNF is successfully Certified
- 24. SDC application is open
- 25. Page HOME > Create new service > General with fields that must be filled out is open
- 26. Create/Update saved successfully message is present in left top corner
- 27. Composition main view is open
- 28. PNF is visible
- 29. PNF is added to service
- 30. Service is Cerified and ready for Distribution
- 31. Distribute Distribute successfully message is present in left top corner
- 32. Monitor main view is opened with information about distribution. Thesr should not be any errors.

Test Case ID	T05	
Test Case Name	PNF registration rejected	
Descri ption	Verification if PRH drops the PnfRegistration request when no AAI entry exists for the correlationID. AAI entries shall not be created by PRH. Test case covers following steps from message flow in 5G - PNF Plug and Play:	
Relea se	Casablanca	
Preco nditio ns	1. Up and running PnP PNF Simualtor according to https://wiki.onap.org/display/DW/PnP+PNF+Simulator	
Testin	Step	Expected Result

g Ste	 1. Verify AAI entry created by SO service using command: curl -X GET -k -H "accept: application/json" -H "Real-Time: true" -H "Content-Type: application/json" -H "X-FromAppId: dcae-curl" -H "x-transactionId: 9998" "https://AAI: AAI@<kubernetes address="" ip="" noed="">:<aai port="" service="">/aai/v11/network/pnfs/correlat ionID>"</aai></kubernetes> 2. Login to virtual machine with simulator 3. In config.json file : a. fill value for sourceName b. fill pnfOamlpv4Address, pnfOamlpv6Address with some value 4. Run script ./simulator.sh run simulator in order to start sending registration request messages 5. Download PRH logs and check that registration requests has been rejected. 6. Once again verify AAI entry created by SO service using command: curl -X GET -k -H "accept: application/json" -H "Real-Time: true" -H "Content-Type: application/json" -H "X-FromAppId: dcae-curl" -H "x-transactionId: 9998" "https://AAI: AAI@<kubernetes address="" ip="" noed="">:<aai port="" service="">/aai/v11/network/pnfs/pnf/<correlat ionID>"</correlat </aai></kubernetes> 			
Act Res	PNF registration is rejected and AAI entries has not be created.
