BUSINESS DRIVERS

This section describes Business Drivers for this Use Case.

Executive Summary - PNF software updates are routine for network upgrades to support new features, improve efficiency or increase capacity on the field, and to eliminate bugs. This use case positions ONAP as a vantage point in orchestrating and managing PNF software upgrades inline with the business and service objectives.

Business Impact - Deployment and orchestration of new network services over both VNFs and PNFs in a model and software driven way simplifies the network management. As 5G networks will host a large number of PNFs from multiple vendors, streamlining service upgrades that involve PNF software changes through ONAP will reduce the OPEX substantially.

Business Markets - Carriers both in the mobile and fixed-line space host PNFs at the edge of the network. New 5G deployments as well as legacy 4G systems in the mobile carrier space should be considered as target markets.

Funding/Financial Impacts - Orchestrating PNF software updates via an ONAP deployment will enable better service planning, faster introduction of new network services over field-deployed PNFs, and reduce the operational costs.

Organization Mgmt, Sales Strategies - Harmonizing PNF and VNF software management in a model and workflow driven manner is essential in 5G systems where PNFs will continue to exist in large numbers and they are expected to have more frequent software upgrades (as they will have more capabilities that can be controlled or upgraded via software). Thus ONAP can be the "go-to" solution if this harmonization can be done successfully.

Current Status of PNF Software Upgrade

PNF in place software upgrade is supported in Casablanca and updated in Dublin

- With the support of an EM
- Ansible protocol only
- Plan to use LCM API with existing SO building blocks
- Impacts on SDNC only (not E2E solution yet)

More details, [5G - PNF Software Update & 5G - PNF SW Upgrade \(Casablanca carry-over items\)](#)

PNF Software Upgrade Scenarios

There are 4 scenarios proposed:

1. Using direct Netconf/Yang interface with PNF
2. Enable service level LCM operations
3. Using Ansible protocol with EM
4. Using Netconf/Yang interface with EM

Scenarios	Descriptions	Service level impacts	PNF software upgrade	Schema updates	Controller API	Protocols	EM	Proposed by	Target releases
1	<ul style="list-style-type: none"> Support direct PNF NETCONF interface with the vendor-specific YANG model. Enhance SO in-place software upgrade workflow with generic SO building blocks, which can be used for workflow design in the design time. Using CDS self-service API between SO and controller with the support of PNF in-place software upgrade Enhance VID to demonstrate single PNF in-place software upgrade Enhance SO procedure to support AAI update after the software upgrade completion. 	No	one PNF instance	No	CDS self-service	Netconf	No	Ericsson	Frankfurt
3	<ul style="list-style-type: none"> Enhancement and additions of PNF in-place software update Using LCM API Using Ansible protocol With EM 	No	one PNF instance	No	LCM API	Ansible	Yes	Huawei	Frankfurt
4	<ul style="list-style-type: none"> NETCONF interface with EM Using CDS self-service API 	No	one PNF instance	No	CDS self-service	Netconf	Yes	Huawei	Frankfurt

Common tasks for all scenarios:

- Same SO work flows with generic workflow design and generic SO building blocks
- LCM evolution with API Decision Tree
- Same PNF upgrade UI in VID

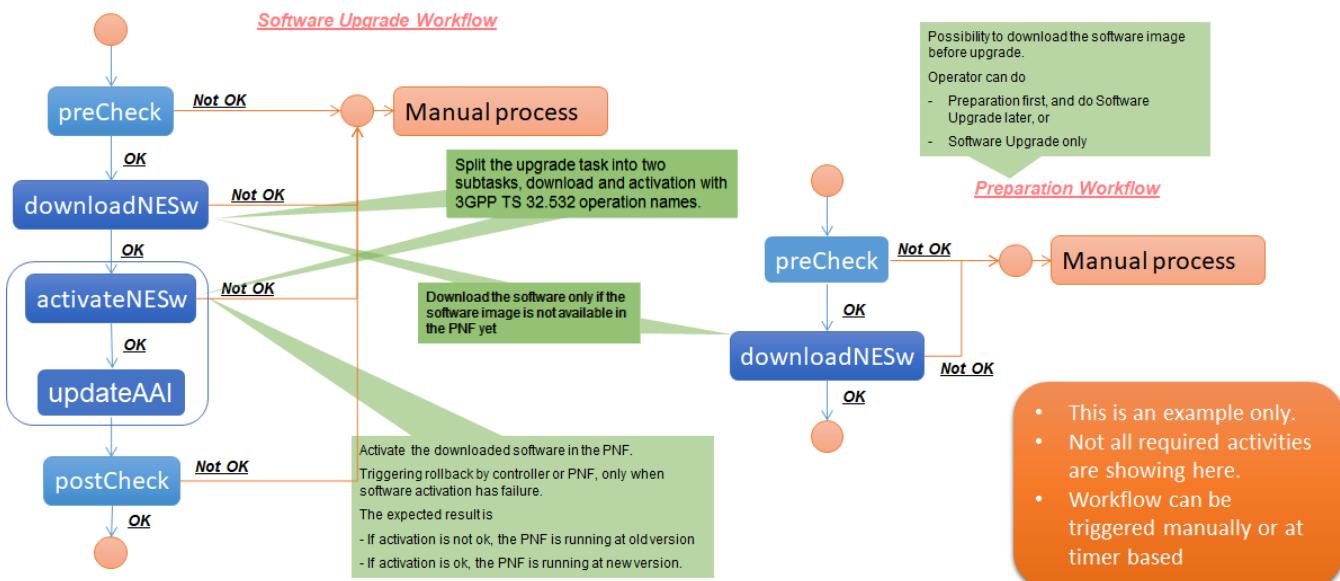

[scenario 2] Supporting schema update at software upgrade completion, targeting Frankfurt+

- Updating the design time service template using vendor provided onboarding package
- Upgrading a run time service instance based on the updated service template
- Updating the run time catalog at software upgrade completion

Common Tasks for all scenarios

SO workflow Example to upgrade one PNF instance

SO activities operations:

SO precheck/postcheck operation

precheck/postcheck

- Pre condition
 - PNF instance is in service
- Post condition
 - PNF instance is in service, and health
- Exceptions
 - PNF instance is not health and not upgradeable
- Inputs:
 - pnf-name
- Outputs:
 - Result: OK, not OK

THE LINUX FOUNDATION

ONAP

SO downloadNESw operation

- Pre condition
 - PNF instance is in service and health
 - Software image of the target software version is available for downloading on remote server
- Post condition
 - PNF storage cleanup is processed in the PNF before downloading, if there is a need.
 - Software download to the PNF of the target software version is completed
- Exceptions
 - Operation failed: e.g. Resource limitation.
- Inputs:
 - pnf-name (data type: string)
 - software-versions (data type: string array): the target software version list to be downloaded
- Outputs:
 - Result: completed, or failure
 - Reason if failure, e.g. Operation failed, Resource unavailable, etc.

THE LINUX FOUNDATION

ONAP

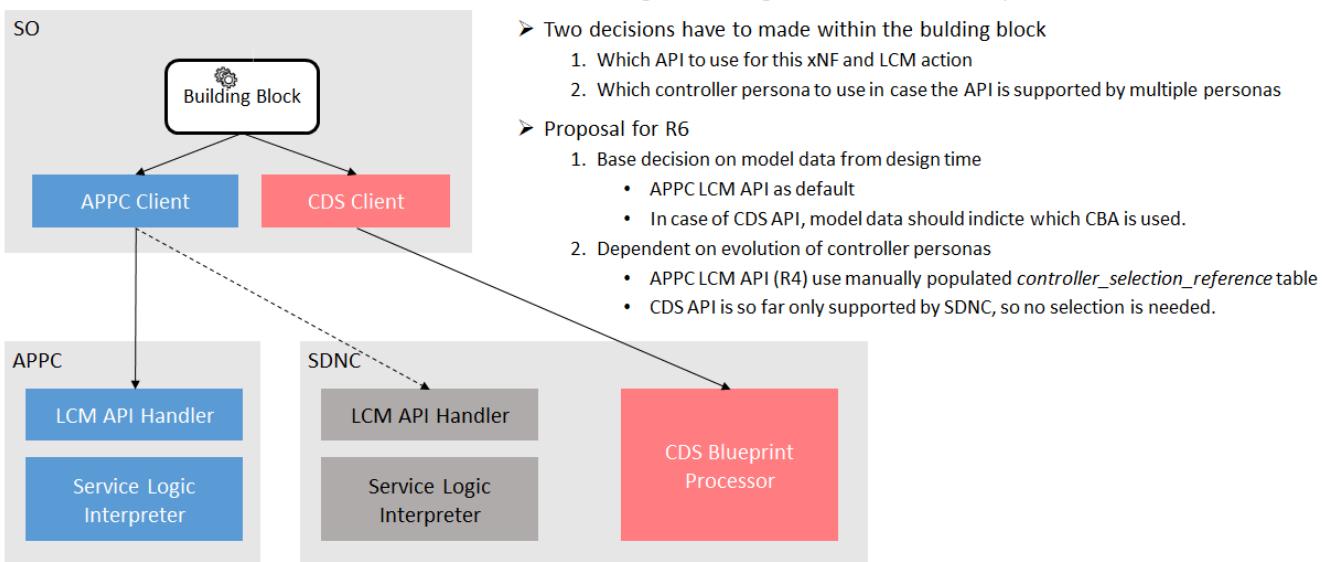

SO activateNESw (+UpdateAAI) operation

- Pre condition
 - PNF instance is in service and health
 - Software image of the target software version is downloaded to the PNF instance
- Post condition
 - Software activate is completed and PNF instance is running is target software version
 - Software-version of the PNF instance is updated in AAI entry
- Exceptions
 - Operation failed, PNF instance is running in old software version
- Inputs:
 - pnf-name (data type: string)
 - software-version(data type: string): the target software version to be activated
- Outputs:
 - Result: completed, or failure
 - Reason if failure, e.g. Operation failed, Resource limitation, etc.

THE LINUX FOUNDATION

ONAP

LCM evolution with API Decision Tree

Development Status

Impacts Summary

PROJECT	PTL	User Story / Epic	Requirement
A&AI	James Forsyth		
AAF	Jonathan Gathman		
APPC	Takamune Cho		
CLAMP	Gervais-Martial Ngueko		
CC-SDK	Dan Timoney	Epic #1: PNF Software Upgrade	<ul style="list-style-type: none"> 1. Support LCM API / self service API for downloadNESw and activateNESw actions 2. Provide CDS blueprint for downloadNESw and activateNESw (Test only)
DCAE	Vijay Venkatesh Kumar		
DMaaS	Mandar Sawant		
External API	Matthieu Geerebaert		
MODELING	Hui Deng		
Multi-VIM / Cloud	Bin Yang		
OOF	Shankaranarayanan Puzhavakath Narayanan		
POLICY	Pamela Dragosh		
PORTAL	Manoop Talasila		
SDN-C	Dan Timoney	Epic #1: PNF Software Upgrade	<ul style="list-style-type: none"> 1. Support LCM API for downloadNESw and activateNESw actions 2. Provide ansible playbooks for downloadNESw and activateNESw (Test only)
SDC	Ofir Sonsino	Epic #1: PNF Software Upgrade	<ul style="list-style-type: none"> 1. support generic workflow design 2. CBA association enhancement to support PNF upgrade. Impacts on PNFD AID model 3. CBA association enhancement to support VNF upgrade. Impacts on VNFD AID model

SO	Seshu Kumar Mudiganti	Epic #1: PNF Software Upgrade	1. Support generic PNF CM workflow, including SO building block shall be extended to support PNF LCM actions 2. SO API extension: PNF software upgrade with target software version 3. SO BB for downloadNESw, activateNESw, preCheck, postCheck 4. API (LCM or CDS SS) selection within the same BB
VID	Ittay Stern	Epic #1: PNF Software Upgrade	1. trigger PNF Sw upgrade workflow, providing corresponding parameter values
VNFRQTS	Steven Wright	Epic #1: PNF Software Upgrade	update the PNF/VNF upgrade requirements
VNF-SDK	Weitao Gao		
CDS	Yuriy Malakov	Epic #1: PNF Software Upgrade	1. Provide CDS blueprint for downloadNESw and activateNESw 2. API (LCM or CDS SS) selection within the same BB
Integration	Brian Freeman

Test Status

1	There should be a test case for each item in the sequence diagram	NOT YET TESTED
2	create additional requirements as needed for each discreet step	COMPLETE
3	Test cases should cover entire Use Case	PARTIALLY COMPLETE
4	Test Cases should include enough detail for testing team to implement the test	FAILED

Scenario 1: PNF Software Upgrade Using direct NETCONF/YANG interface with PNF Test Cases

Test Case Id	Test Case	Test Type	Status
TEST-CASE-1	Test Check in SDNC certificates to connect node are properly installed	Integration (robot)	COMPLETE
TEST-CASE-2	Test Blue print archive is properly uploaded to blueprint-processor	Integration (robot)	COMPLETE
TEST-CASE-3	Test resource package and service is successfully distributed from SDC to SO	Integration (robot)	COMPLETE
TEST-CASE-4	Test all the pnf workflows are successfully fetched from SO	Integration (robot)	COMPLETE
TEST-CASE-5	Test Service instantiation is triggered from VID to SO and status is COMPLETED for preparation(Download) workflow	Integration (robot)	COMPLETE
TEST-CASE-6	Verify on PNF-simulator that there is pnf_sw_version-2.0.0 entry added into the list and its status is DOWNLOAD-COMPLETED	Integration (robot)	COMPLETE
TEST-CASE-7	Test Service instantiation is triggered from VID to SO and status is COMPLETED for software upgrade workflow	Integration (robot)	COMPLETE
TEST-CASE-8	Verify on PNF-simulator that there is pnf_sw_version-3.0.0 entry added into the list and its status is ACTIVATION-COMPLETED	Integration (robot)	COMPLETE
TEST-CASE-9	Verify on AAI-Simulator that for pnf PNFDemo sw-version is pnf_sw_version-3.0.0.	Integration (robot)	COMPLETE

Test Cases Details:

All the test cases for Scenario 1 are robot tests that can be ran automatically from the same steps which will be shown below.

Testing Steps	#	Step	Expected Result
	1	In the Integration csit repo, run plans/usecases/pnf-sw-upgrade robot tests	Pnf-sw-upgrade robot tests running
	2	Wait for the tests to finish	Tests finished without timeout
	3	Check the test reports	All test cases run successfully
Status (Pass/Fail)	ONAP Jira Ticket: · https://jira.onap.org/browse/INT-1308 ONAP PNF SW Upgrade Daily CSIT Tests: · https://logs.onap.org/production/vex-yul-ecomp-jenkins-1/usecases-master-verify-csit-pnf-sw-upgrade/17/log.html.gz

Test Case ID	TEST-CASE-2																																																				
Test Case Name	Test Onboarding of PNF Package with non-mano Software Information in SDC GUI																																																				
Description	Manually onboard the PNF Package with non-mano Software Information in the SDC GUI, creating a VSP and importing as a ONAP PNF Resource.																																																				
Release	Frankfurt																																																				
Preconditions	<ul style="list-style-type: none"> Local SDC or ONAP deployment available and running; A SDC Vendor License Model already created; A valid PNF Package with non-mano Software Information. 																																																				
Testing Steps	<table border="1"> <thead> <tr> <th>#</th> <th>Step</th> <th>Expected Result</th> </tr> </thead> <tbody> <tr> <td>1</td> <td>Access SDC GUI as a Designer.</td> <td>SDC Home screen is shown.</td> </tr> <tr> <td>2</td> <td>Go to the Onboard Workspace .</td> <td>Onboard workspace is shown.</td> </tr> <tr> <td>3</td> <td>Click on "CREATE NEW VSP".</td> <td>"New Software Product" popup is shown.</td> </tr> <tr> <td>4</td> <td>Fill in the "New Software Product" required information, selecting "Network Package" as the Onboarding Procedure and click on create.</td> <td>The VSP Overview page is shown.</td> </tr> <tr> <td>5</td> <td>In the VSP Overview screen, Software Product Attachments, click on select file and provide the PNF Package with non-mano Software Information.</td> <td>The VSP attachment validation screen is shown.</td> </tr> <tr> <td>6</td> <td>In the VSP attachment validation, click on the Submit button.</td> <td>A "Commit & Submit" popup is shown.</td> </tr> <tr> <td>7</td> <td>Fill the "Commit & Submit" popup with any comment and click in the "Commit & Submit" button.</td> <td>A "Submit Succeeded" information is shown.</td> </tr> <tr> <td>8</td> <td>Close the "Submit Succeeded" popup and go to the Home workspace.</td> <td>SDC Home screen is shown.</td> </tr> <tr> <td>9</td> <td>Hover your mouse to the IMPORT square and click in "Import VSP".</td> <td>A "Import VSP" modal is shown with the SDC VSP list.</td> </tr> <tr> <td>10</td> <td>Search for the created VSP.</td> <td>The created VSP is shown in the VSP list.</td> </tr> <tr> <td>11</td> <td>Click on the VSP and then in the Download VSP link.</td> <td>The VSP CSAR package is downloaded.</td> </tr> <tr> <td>12</td> <td>Open the CSAR package and check that the software information artifact is present in the folder Artifacts/Informational/PNF_SW_INFORMATION.</td> <td>The onboarded artifact is present on the folder.</td> </tr> <tr> <td>13</td> <td>Go back to the "Import VSP" modal and click on the "Import VSP" link.</td> <td>The Resource Design General page is open with the PNF package information.</td> </tr> <tr> <td>14</td> <td>Click on the "Create" button to create the resource.</td> <td>A creation confirmation message is shown.</td> </tr> <tr> <td>15</td> <td>On the left panel, click on the "Properties Assignment".</td> <td>The "Properties Assignment" page is shown.</td> </tr> <tr> <td>16</td> <td>Verify that the "software_versions" property is present and filled with the versions provided in the software information artifact.</td> <td>The "software_versions" property is present with the expected content.</td> </tr> </tbody> </table>	#	Step	Expected Result	1	Access SDC GUI as a Designer.	SDC Home screen is shown.	2	Go to the Onboard Workspace .	Onboard workspace is shown.	3	Click on "CREATE NEW VSP".	"New Software Product" popup is shown.	4	Fill in the "New Software Product" required information, selecting "Network Package" as the Onboarding Procedure and click on create.	The VSP Overview page is shown.	5	In the VSP Overview screen, Software Product Attachments, click on select file and provide the PNF Package with non-mano Software Information.	The VSP attachment validation screen is shown.	6	In the VSP attachment validation, click on the Submit button.	A "Commit & Submit" popup is shown.	7	Fill the "Commit & Submit" popup with any comment and click in the "Commit & Submit" button.	A "Submit Succeeded" information is shown.	8	Close the "Submit Succeeded" popup and go to the Home workspace.	SDC Home screen is shown.	9	Hover your mouse to the IMPORT square and click in "Import VSP".	A "Import VSP" modal is shown with the SDC VSP list.	10	Search for the created VSP.	The created VSP is shown in the VSP list.	11	Click on the VSP and then in the Download VSP link.	The VSP CSAR package is downloaded.	12	Open the CSAR package and check that the software information artifact is present in the folder Artifacts/Informational/PNF_SW_INFORMATION.	The onboarded artifact is present on the folder.	13	Go back to the "Import VSP" modal and click on the "Import VSP" link.	The Resource Design General page is open with the PNF package information.	14	Click on the "Create" button to create the resource.	A creation confirmation message is shown.	15	On the left panel, click on the "Properties Assignment".	The "Properties Assignment" page is shown.	16	Verify that the "software_versions" property is present and filled with the versions provided in the software information artifact.	The "software_versions" property is present with the expected content.	
#	Step	Expected Result																																																			
1	Access SDC GUI as a Designer.	SDC Home screen is shown.																																																			
2	Go to the Onboard Workspace .	Onboard workspace is shown.																																																			
3	Click on "CREATE NEW VSP".	"New Software Product" popup is shown.																																																			
4	Fill in the "New Software Product" required information, selecting "Network Package" as the Onboarding Procedure and click on create.	The VSP Overview page is shown.																																																			
5	In the VSP Overview screen, Software Product Attachments, click on select file and provide the PNF Package with non-mano Software Information.	The VSP attachment validation screen is shown.																																																			
6	In the VSP attachment validation, click on the Submit button.	A "Commit & Submit" popup is shown.																																																			
7	Fill the "Commit & Submit" popup with any comment and click in the "Commit & Submit" button.	A "Submit Succeeded" information is shown.																																																			
8	Close the "Submit Succeeded" popup and go to the Home workspace.	SDC Home screen is shown.																																																			
9	Hover your mouse to the IMPORT square and click in "Import VSP".	A "Import VSP" modal is shown with the SDC VSP list.																																																			
10	Search for the created VSP.	The created VSP is shown in the VSP list.																																																			
11	Click on the VSP and then in the Download VSP link.	The VSP CSAR package is downloaded.																																																			
12	Open the CSAR package and check that the software information artifact is present in the folder Artifacts/Informational/PNF_SW_INFORMATION.	The onboarded artifact is present on the folder.																																																			
13	Go back to the "Import VSP" modal and click on the "Import VSP" link.	The Resource Design General page is open with the PNF package information.																																																			
14	Click on the "Create" button to create the resource.	A creation confirmation message is shown.																																																			
15	On the left panel, click on the "Properties Assignment".	The "Properties Assignment" page is shown.																																																			
16	Verify that the "software_versions" property is present and filled with the versions provided in the software information artifact.	The "software_versions" property is present with the expected content.																																																			

Status (Pass /Fail)	<p>Local SDC deployment: COMPLETE</p> <p>Used package: onboarding-package.csar</p>   <p>Test case recording: Onboard_PNF_Software_Version.mkv</p>
Testing Lab	Local SDC deployment

Test Case ID	TEST-CASE-3												
Test Case Name	Test Onboarding of PNF Package with non-mano Software Information in SDC Sanity-UI test												
Description	The test will onboard the PNF Package with non-mano Software Information in the UI SDC Sanity test flow												
Release	Frankfurt												
Preconditions	Local SDC or ONAP deployment available and running												
Testing Steps	<table border="1" data-bbox="314 1262 910 1448"> <thead> <tr> <th>#</th><th>Step</th><th>Expected Result</th></tr> </thead> <tbody> <tr> <td>1</td><td>Run SDC sdc-ui-tests</td><td>sdc-ui-tests running</td></tr> <tr> <td>2</td><td>Wait for the tests to finish</td><td>Tests finished without timeout</td></tr> <tr> <td>3</td><td>Check the test reports</td><td>All test cases run successfully</td></tr> </tbody> </table>	#	Step	Expected Result	1	Run SDC sdc-ui-tests	sdc-ui-tests running	2	Wait for the tests to finish	Tests finished without timeout	3	Check the test reports	All test cases run successfully
#	Step	Expected Result											
1	Run SDC sdc-ui-tests	sdc-ui-tests running											
2	Wait for the tests to finish	Tests finished without timeout											
3	Check the test reports	All test cases run successfully

Scenario 3: PNF Software Upgrade Using Ansible with EM Test Cases

Test Case Id	Test Case	Test Status
TEST-CASE-1	UpgradePreCheck for PNF instance from SDNC to EM using LCM API	COMPLETE
TEST-CASE-2	DownloadNESw for PNF instance from SDNC to EM using LCM API	COMPLETE
TEST-CASE-3	ActivateNESw for PNF instance from SDNC to EM using LCM API	COMPLETE

TEST-CASE-4	UpgradePostCheck for PNF instance from SDNC to EM using LCM API	COMPLETE
TEST-CASE-5	Test PNF SW upgrade Workflow for PNF instance from SO to SDNC (using LCM API) to EM	COMPLETE

Details at [Enhancement on PNF S/W Upgrade using Ansible](#).

Scenario 4: PNF Software Upgrade Using Netconf/Yang Interface with EM Test Cases

Test Case Id	Test Case	Test Status
TEST-CASE-1	Download NE SW for PNF instance 1 from CDS to EM using SS REST API	COMPLETE
TEST-CASE-2	Activate NE SW for PNF instance 1 from CDS to EM using SS REST API	COMPLETE
TEST-CASE-3	Download NE SW for PNF instance 2 from CDS to EM using SS REST AP	COMPLETE
TEST-CASE-4	Activate NE SW for PNF instance 2 from CDS to EM using SS REST API	COMPLETE
TEST-CASE-5	Test PNF SW upgrade Workflow for PNF instance 1 from SO to CDS (using SS gRPC API) to EM	COMPLETE

Details at [PNF software upgrade with Netconf/Yang interface with EM](#).

Meeting Schedule for Impacted Project Discussion

The meeting schedule is to present this use case slides to the impacted projects.

Planned Date	Related Project/UC	Meeting Host	Other
July 15	SDC	Ofir Sonsino	
July 11	CDS	Yuriy Malakov	
July 10	Use case Realization	Benjamin Cheung	
July 10	Change Management	Ajay Mahimkar	
Oct 9	SO	Seshu Kumar Mudiganti
