

Scrum

The most efficient practice to help a team focusing until a task is done, done, done

Definition of done: coded (and commented), tested, documented (from a end user perspective)

Team stands up daily for 15 minutes

Team size: 5 to 9

Team member provide status on their current activity (what was complete, plan for the day, issue)

Goal is to provide transparency, bring issue, not to fix issue

Issues are talked separately with relevant people only

Tips

Tasks In Progress: Active Sprint Wallboard

Track progress: burndown chart

Acceptance criteria are documented and agreed
