

Integration Project

Scope

The integration project has been approved on the 5th of November 2017, see [initial description](#).

Most of the initial scope is still valid. The main missions consist in:

- Providing testing environment and support for the release use cases
- Executing Cross-project Continuous System Integration Testing (CSIT)
- Managing full ONAP CI chains (daily master, staging, stable) to ensure the stability of the integration
- Developing and perform tests within full ONAP context (healthcheck, End to End, performance, robustness...)
- Validating the ONAP release

Due to the diversity of the project, the integration team manages several official ONAP repositories: `integration/*`, `testsuite/*`, `demo/*`, `oparent/*`.

CI/CD

- User Guide
- Use Cases
- Integration Page

- How does OOM gating work?
- How can I build a jenkins job (JJB)?
- Where can I see CI/CD ONAP status?
- Where can I find the list of tests included in the CI/CD ?
- How to run a weekly tests?
- How to create a new pipeline (with new ONAP version) ?

- Jenkins
- gitlab-ci
- tox
- coala (used for linting)

Tests

- Where can I find the list of supported use cases?
- Is there any available simulators /emulators I could reuse for my own use case?
- How to start with xtesting?
- How to start with Python-onapsdk?
- How do I run xtesting tests on my ONAP lab?
- How can I create an installation cross component health test?
- How Can I move my tests from CSIT to my repo?
- How to run stability tests?
- How to re-run a test on a daily platform?

Infrastructure

- Kubernetes
- Openstack
- Docker

Training

- katacoda

Misc

- How can I build a docker image?
- Where can I find a java 11 baseline image for my component?
- How can I use Python baseline image?
- How can I manage container tags?
- and many more
