

VES-Notification processing

- [Overview](#)
- [Fault notifications](#)
- [Configuration notifications](#)
- [Implementation](#)

Overview

- Functionality for December PoC .. see here: <https://wiki.o-ran-sc.org/display/OAM/Upcoming+PoC++week+of+December+2nd+2019>
- Related to [Mountpoint services](#)

Fault notifications

- Get fault notifications from VES via DMaaP
- Forward to devicemanager
 - Use : RESTCONF
- Devicemanager will handle notification similar to NETCONF notifications
 - Alarms/events are visible in
 - alarm log
 - current problems
 - alarm status bar increased

Configuration notifications

- Specify workaround for VES message that contains "configuration change information" (Try to use Fault notification message)
- Forward to devicemanager
- Devicemanager should log this messages

Implementation

- Functionality should be integrated into "mountpoint-registrar" bundle
- Read the related message(s) from DMaaP
- Forward the events to devicemanager via RESTCONF interface
