SDN-C USE CASE IMPACTS FOR R6

[Frankfurt Release Requirements](#)

Overview:

SDN-C, SDN-R, APP-C, VF-C, CC-SDK ... CC-SDK is the platform to build controllers.

SDN-C is THE controller. Controllers can have multi-persona, a particular instance might have different functionality turned off/on. one persona is SDN-R. Trying to get to APP-C be a persona (multi-release in R7+ Brian Freeman). Architectural goal is merge them. VF-C and APP-C are controllers in their own right. VF-C idea talking to a 3rd party controller.

SDN-C, SDN-R, APP-C are all rooted off of CC-SDK.

should SO be declarative or procedural? should it be driven by TOSCA or BPMN. In R1 #1 AT&T view of SO was driven by BPMN/procedural. SDNC is BPMN align #2 view of a TOSCA-driven approach. VF-C TOSCA base orchestration

how should we control life cycle -

PNF / Preonboarding Onboarding	Wiki Page: PNF/VNF PREONBOARDING / ONBOARDING in R6 Frankfurt SUMMARY: No impact
PNF / Plug and Play	Wiki Page: PNF PLUG and PLAY in R6 Frankfurt Frankfurt Release Requirements : - Use Case Spreadsheet: Indicates Impact WIKI: (Ericsson) Epic#1: Controller to PNF exchange (Epic) STEP 37 Epic #1: 1. Support NetConf, uses CDS component. W/F in SO. Extended with optional configuration step in SO uses CDS API. wi/ CDS to create blueprint ansible/netconf. CDS south-bound can use different protocols. 2. Support ONAP communication back to the PNF (via Ansible/Netconf) see Step 37 on the PnP Wiki. 3. (Might be all fully working - might no new development) See the Netconf communication main Use Case. PnP defines the step 37; the actual work is in the NetConf Use Case SUMMARY: Controller to PNF (NetConf) communication Question: Will NetConf adaptor in CDS? Answer: in R4 there is a solution uses CDS as part of the post-inst. for PNF. The change in R6, to convert from python to coclin still using opendaylight as the open client. Dan: CDS has N/C built in as well push back that's not architecturally correct. Dan Timoney Netconf going through SDN controller so architecture S/C doesn't push back. if we took that out, then that would raise the question if CDS is another controller, but CDS is not a controller.

Looking at adding a second option for certificate handling used by Netconf TLS in SDN-C. Option from init container of SDN-C request second certificate from AAF using existing API every ONAP component would request a certificate to protect internal communication Border components SDNC want a dedicated cert. e.g xNF over TLS option to request 2nd cert. from AAF use it in opendaylight. Installs the cert into the NetConf keystore in ODL.</p> <div style="border: 1px solid #ccc; padding: 5px; margin-bottom: 10px;">  SDNC-966 - NETCONF/TLS Certificate Management CLOSED </div> <p>In OOM honor global flag to disable/enable AAF. if AAF is disabled, how is this handled?</p> <p>A: The fall back is a manual method to provide cert. via in a persistent volume. A previous procedure. Could a self-signed certificate be used? Usually service providers will have their own procedure for certificates and not necessarily using AAF. Thus, the manual method is important for other reasons from actual service provider scenarios & procedures for cert. management.</p>
