

API Style Validation Tool

Spectral

We have successfully applied Spectral along with custom rules to "lint" Swagger files based on the ONAP Swagger style guide!

Spectral may be found at: <https://github.com/stoplighdio/spectral>

Instructions to install Spectral may be found at: <https://stoplight.io/p/docs/gh/stoplighdio/spectral/docs/getting-started/installation.md>

With Spectral, ONAP can provide our own ruleset file extending the rules used by Spectral.

The Draft ONAP Swagger Specific Style Rules for Spectral may be found here: [ONAP Swagger Style Ruleset for Spectral](#)

The Spectral CLI will look for a ruleset file called `.spectral.yml` or `.spectral.json` in the current working directory.

We could also use a different file by using the CLI option `--ruleset`

Additional information on Spectral Rulesets may be found at: <https://stoplight.io/p/docs/gh/stoplighdio/spectral/docs/getting-started/rulesets.md>
