

2020-01-17 Meeting notes

Date

17 Jan 2020

Attendees

- [N.K. Shankaranarayanan](#)
- [Swaminathan Seetharaman](#)
- [Saravanan Ayyadurai](#)
- [Jeff Hartley](#)
- [Vikas Varma](#)
- [Melanie Sater](#)
- [Pramod Jankhedkar](#)
- [Marge Hills](#)
- [Marci Haas](#)
- [KINGSLY LAWRENCE](#)
- [Benjamin Cheung](#)

Discussion items

Time	Item	Who	Notes
	CLC for PCI and ANR		Discussed CLC objectives. See slides. Simple co-ordination between two control loops. Target is to hold CL2 while CL1 is active. If changes are too complex, use existing CLC to deny CL2 instead of hold.
	CM notification in ORAN		Discussion in ORAN re. exact details of CM message. Likely that VES message with CMNotify is still close to final solution. OOF-SON plan is to proceed with some pre-standard draft version of VES msg for POC-only implementation
	M2/M3		Includes a) CLC function, b) optimization API changes. Since standard format was not available, scaling back on making VES msg and yang model handling as part of official ONAP Frankfurt. Will implement as POC only
	OOF API		Vikas will make changes to API
	VES msg format		Draft of VES with CMNotify should be available. Shankar to follow up with Marge and Alok.
