Honolulu Exception Request for MultiCloud

Name	Bin Yang
Milestone or Requirements Exception?	Requirement Exception
Project or Requirement Name and JIRA	MultiCloud request following exception: ⚡ **REQ-437** - COMPLETION OF PYTHON LANGUAGE UPDATE (v2.7 v3.x) `IN PROGRESS`
Milestones affected	N/A
Projects affected	N/A
Background description	MultiCloud components which use onaplog module cannot upgrade to python3.8 since onaplog can only support up to python3.7 . It is not clear whether onaplogging (https://github.com/onap/logging-analytics/commits/master/pylog/onaplogging) will fix this issue, what make it worse is that any further upgrading of versions of onaplogging package (https://pypi.org/project/onappylog/#history) requires the original author 's help which is not easy.
Schedule impact	N/A
Recovery plan	Python 3.7 should be sufficient for now, and multicloud will remove the dependency on onaplogging in Istanbul release so multicloud could upgrade to python3.8
Milestone schedule change	N/A
Risk	N/A
Status	Closed
Decision	Approved
